Design of the European Road Safety Decision Support System

George Yannis and Eleonora Papadimitriou

23rd MEETING OF THE INTERNATIONAL TRAFFIC SAFETY DATA AND ANALYSIS GROUP
Rome, 13 October 2016
SafetyCube project

Funded by the European Commission under the Horizon 2020 research framework programme

Coordinator: Pete Thomas, Loughborough University

Start: May 2015

Finish: April 2018

17 partners from 12 EU countries
SafetyCube concept and vision

• Problem
  – Evidence based road safety policies are becoming more usual and there is much better availability of national data and state of the art knowledge
  – Effective road safety policies need good information about accident risk factors and about measures

• SafetyCube will meet this need by generating new knowledge about accident risk factors and the effectiveness of measures relevant to Europe, to be integrated in a European Road Safety Decision Support System (DSS)
The SafetyCube DSS objective is to provide the European and Global road safety community a user friendly, web-based, interactive Decision Support Tool to properly substantiate their road safety decisions for the actions, measures, programmes, policies and strategies to be implemented at local, regional, national, European and international level.

The main contents of the SafetyCube DSS concern:
- road accident risk factors and problems
- road safety measures
- best estimate of casualty reduction effectiveness
- cost-benefit evaluation
- all related analytic background

Special focus is given to linking road safety problems with related countermeasures.
SafetyCube DSS Development Methodology

1. Analysis of current road safety DSS worldwide
2. Analysis of User Needs (stakeholder workshops, on-line surveys)
3. Development of common methodology and contents collection (WPs 3-7)
4. Design of the DSS
5. Development of the DSS

Testing, Pilot Operation, User Training and future continuous Maintenance will follow.
Current Road Safety DSS Worldwide

- Crash Modification Factors Clearinghouse (www.cmfclearinghouse.org) by NHTSA (USA) - **5.151 CMF** on infrastructure only - on going

- Road Safety Engineering Kit (www.engtoolkit.com.au) by Austroads (Australia) - **67 treatments** on infrastructure only

- PRACT Repository (www.pract-repository.eu) by CEDR (Europe) - **889 CMF and 273 APM** on infrastructure only – high quality

- iRAP toolkit (toolkit.irap.org/) by iRAP - **58 treatments** (43 on infrastructure)

- Safety Performance Factors Clearinghouse (spfclearinghouse.org) by Tatum Group LLC, Dr. Andrew Kwasniak (USA) - **few SPF** – subscribers only
SafetyCube DSS Users

- Public Authorities
  local, regional, national, European and international
- Industry
  Infrastructure, Vehicle, Insurance, Technology
- Research Institutes
- Non Governmental Organisations
- Mass media

The SafetyCube DSS is intended to have a life well beyond the end of the SafetyCube research project. Furthermore, it will be developed in a form that can readily be incorporated within the existing European Road Safety Observatory of the European Commission DG-MOVE.
SafetyCube DSS User Needs

- SafetyCube stakeholders’ consultation Workshops
  - Brussels, Jun 2015
  - Ljubljana, Oct 2015
  - Brussels (WP5-Infrastructure), Feb 2016
  - Hague (WP7-Serious Injuries), May 2016
  - Brussels, Sep 2016

- SafetyCube on-line survey

- Consolidated Table of user needs
SafetyCube DSS Design Principles

- A Modern web-based tool
- High Ergonomy interface
- Simple structure
- Powerfull Search Engines
- Fully Documented information
- Easily Updated
SafetyCube DSS Website Design Principles

- A strong **web address**
  e.g. www.safetycube-dss.eu

- **Consistent design** throughout all tools
  (unique visual identity, colors, design, messages, etc.)

- Modern and **ergonomic** design
  [multimedia (photos and videos) wherever possible]

- Allow for **updates**
  - feedback from the users
  - feedback from visits traffic monitoring

- Develop a robust **promotion policy**, during and after the project (newsletter, twitter, etc.)
SafetyCube DSS Search Engine

- **Fully linked** search
  - search a road safety problem alone or through the measures
  - search a measure alone or through the road safety problems
  - search for risks and measures related to specific road user groups or crash types (accident scenario)

- **Fully detailed** search
  - search by any parameter in each data table (road safety problems, measures)

- **Fully flexible** search
  - adjust and customize search according to results

- **Fully documented** search
  - access background information at any stage (links, etc.)
Relational Data Base

- The templates of **coded studies** will undergo a thorough checking and debugging process.

- The templates are eventually stored in a **relational database**, which will serve as the back-end of the DSS.

- Front-end DSS results will be retrieved through **queries** on the back-end database (DSS search engine).
Home Page Main Menu (About - Search - Tools)
Three Levels of Search (Search - Results pages - Individual study pages)
Two Interlinked Search Streams (Risk Factors – Road Safety Measures)
The SafetyCube DSS is the European Road Safety Decision Support System, which has been produced within the European research project SafetyCube, funded within the Horizons 2020 Programme of the European Commission, aiming to support evidence-based policy making.

The SafetyCube Decision Support System provides detailed interactive information on a large list of road accident risk factors and related road safety countermeasures.
Three categories of taxonomy fields

- **Categories (3)**
  road user, infrastructure, vehicle

- **Topics (57)**
  e.g. roadside deficiencies, distraction inside vehicle, inappropriate speed

- **Specific risk factors (175)**
  e.g. no clear-zone, mobile phone, too fast / too slow
Measures Search Parameters

Three categories of taxonomy fields

- **Categories**
  road user, infrastructure, vehicle

- **Topics**
  e.g. formal tools to address road network deficiencies, speed regulation

- ** Specific measures**
  e.g. road safety audits, lower speed limits
Search results

- Short summaries of syntheses (meta-analyses) available
- Table listing the available synopses, meta-analyses and other studies
- Table columns concern main study characteristics (design, outcome variable, effect type and size, country, year etc.)

Refine search

- Specific risk factor
- Search filters:
  - Road user types: All, car occupants, drivers, passengers, PTW riders, pedestrians, cyclists, HGV.
  - Road types: All, motorways, rural roads, urban roads
  - Region/Country: EU, EU countries (all names), US and Canada, Australia, Asia.
  - "Colour code": Risky, probably risky, unclear, probably not risky

Links to related measures

- Go to measures search page, where the list of related measures is displayed as a pre-filled search
Individual study results

Title, author, source, abstract

- Link to URL for full-text download (depending on Institute permissions)

Study design info

- Country
- Research Method, Design, Sample N
- Control group, Risk Group
- Modifying Conditions

Study results:

- Table listing the effects reported in the study
- Table columns concern main study / effect characteristics (outcome variable, effect type, size and confidence intervals, statistical significance)
SafetyCube synopses

Syntheses on risk factors / measures

Summary (2 pages)
- Effect of risk factor / measure and ranking (colour code)
- Risk / safety effect mechanisms
- Risk / safety effects size, transferability of effects

Scientific overview (4-5 pages)
- Comprehensive comparative analysis of available studies designs and results
- Analysis results
  - Meta-analysis
  - Vote-count analysis
  - Qualitative analysis

Supporting document (3-10 pages)
- Literature search strategy and study selection criteria
- Detailed analyses
Road User Group Search Parameters

Road User Groups
- Pedestrian
- Bicycles
- Power Two Wheelers
- Passenger Cars
- Light Goods Vehicles
- Trucks / Bus

For each group, 3+3 categories of taxonomy fields
- **Risks**: road user, infrastructure, vehicle
- **Measures**: road user, infrastructure, vehicle
- **Topic**
- **Specific risk factor / measure**

---

The SafetyCube European Road Safety Decision Support System (DSS) is one of the key objectives of the SafetyCube project to better support evidence-based policy making. The SafetyCube results will be assembled in the form of a Decision Support System that will present for each suggested road safety measure: details of the risk factor tackled, the measure itself, the best estimate of casualty reduction effectiveness, the cost-benefit evaluation and the analytic background. While the development and evaluation of the measures will be developed into a format and structure that will enable industry, policy-makers and other stakeholders to access the information in an efficient manner within the DSS.
Accident Scenario Search Parameters

Accident scenarios
• Pedestrian accident
• Bicycle accident
• Single vehicle accident
• Head-on collisions
• Rear end collisions
• Junction accident – no turning
• Junction accident – turning
• Railway level crossing

For each scenario, 3+3 categories of taxonomy fields
• Related Risks: road user, infrastructure, vehicle
• Related Measures: road user, infrastructure, vehicle
• Topic
• Specific risk factor / measure

The SafetyCube European Road Safety Decision Support System (DSS) is one of the key objectives of the SafetyCube project to better support evidence-based policy making. The SafetyCube results will be assembled in the form of a Decision Support System that will present for each suggested road safety measure: details of the risk factor tackled, the measure itself, the best estimate of casualty reduction effectiveness, the cost-benefit evaluation and the analytic background. While the development and evaluation of the measures will be developed into a format and structure that will enable industry, policy-makers and other stakeholders to access the information in an efficient manner within the DSS.
Key-word search
- Auto-complete field among all key-words in the database

For each key-word, 3+3 categories of taxonomy fields
- Related Risks: road user, infrastructure, vehicle
- Related Measures: road user, infrastructure, vehicle
- Topic
- Specific risk factor / measure

The SafetyCube European Road Safety Decision Support System (DSS) is one of the key objectives of the SafetyCube project to better support evidence-based policy making. ### Road Safety Decision Support Tools

<table>
<thead>
<tr>
<th>Tool</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cost Benefit Calculator</strong></td>
<td>The SafetyCube Cost Benefit Calculator allows you to perform Cost Benefit Analysis of a road safety measure, on the basis of its safety effects (number of crashes or casualties prevented), crash and casualties costs, implementation costs, implementation period etc.</td>
</tr>
<tr>
<td><strong>Serious Injuries</strong></td>
<td>The SafetyCube data and information on serious injuries include estimates of serious injuries in Europe, definitions of serious injuries etc.</td>
</tr>
<tr>
<td><strong>SafetyCube Methodology</strong></td>
<td>The SafetyCube Methodology for the analysis of risk factors and measures effects can be accessed through the SafetyCube reports, publications, and stakeholders' contributions.</td>
</tr>
<tr>
<td><strong>SafetyCube DSS glossary</strong></td>
<td>The glossary of the SafetyCube DSS includes all the definitions and meta-data of the DSS</td>
</tr>
</tbody>
</table>
SafetyCube DSS Development

Next steps

- Development of the **static DSS** (Wire Frames)
  - Completed

- SafetyCube DSS **Development phase**
  - *between September and December 2016*
  - *including all risk factors (~3,500 effects from 600 studies) and several measures*

- SafetyCube DSS **Pilot Operation**
  - *starting early 2017*

- SafetyCube DSS **Opening**
  - *Starting mid 2017*

- Continuous **Enhancement and Update**
  - *Starting on April 2018 (end of SafetyCube project)*
Example questions addressed

- how important is my road safety problem?
- who else is having similar problems?
- what solutions are usually proposed for my problem?
- how efficient are the solutions proposed?
- which is the most efficient solution?
- and if I have a combination of problems ...

... then use SafetyCube DSS to have the answers
SafetyCube DSS
Delivering a long waited powerful tool

- The SafetyCube DSS is a powerful Road Safety Decision Support Tool:
  - long waited,
  - full of scientific evidence,
  - user friendly, web-based and interactive

- SafetyCube DSS is the first integrated road safety support system developed in Europe

- SafetyCube DSS offers for the first time scientific evidence on:
  - risks and not only measures
  - risks and measures not only on infrastructure
  - a very large number of estimates of risks and measures effects
  - links between risks factors and measures

- SafetyCube DSS aims to be a reference system for road safety in Europe and worldwide, constantly improved and enhanced
Design of the European Road Safety Decision Support System

George Yannis and Eleonora Papadimitriou

23nd MEETING OF THE INTERNATIONAL TRAFFIC SAFETY DATA AND ANALYSIS GROUP
Rome, 13 October 2016
