## United Nations Econonomic Committee for Europe

### SafeFITS

# A Global Road Safety Model For Future Inland Transport Systems

Prof. George Yannis, Dr. Eleonora Papadimitriou and Katerina Folla

### SafeFITS Objectives

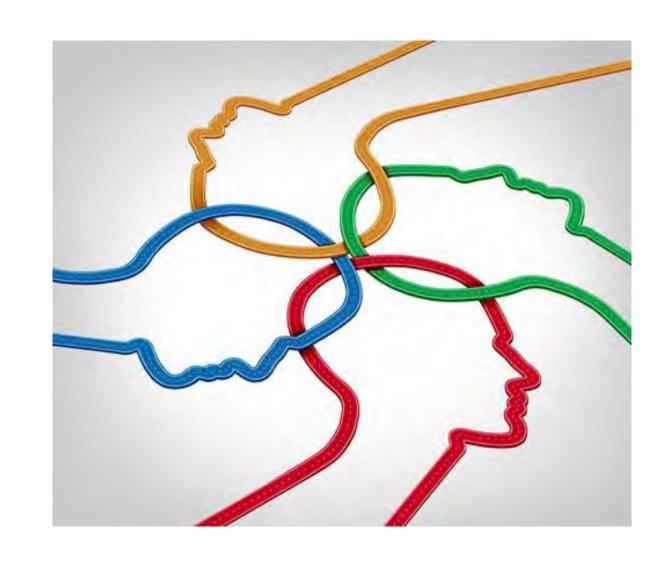

- To develop a macroscopic road safety
  decision making tool that will assist
  governments and decision makers, both in
  developed and developing countries, to
  decide on the most appropriate road safety
  policies and measures in order to achieve
  tangible results.
- The tool is based on the related scientific knowledge available worldwide, with emphasis on recent academic research and project results.

### SafeFITS Report and Presentation Outline

- SafeFITS Conceptual framework
- Literature review of existing research on accident causalities
- Focused literature review on quantified accident causal relations
- SafeFITS Database development
- SafeFITS Model development
- SafeFITS Tool, including:
  - Intervention analysis module
  - Forecasting module
  - Benchmarking module

### Conceptual Framework

Based on the five pillars of WHO Global Plan of Action (WHO, 2011) and an improved version of the SUNflower pyramid (2002):

#### SafeFITS layers

- 1. Economy and Management
- 2. Transport Demand and Exposure
- 3. Road Safety Measures
- 4. Road Safety Performance Indicators
- 5. Fatalities and Injuries

#### SafeFITS pillars

- 1. Road Safety Management
- 2. Road Infrastructure
- 3. Vehicle
- 4. User
- 5. Post-Crash Services

		PILLARS				
		Road Safety     Management	2. Road Infrastructure	3. Vehicle	4. User	5. Post-Crash Services
LAYERS	1. Economy & Management	Economic Deve- lopments, Strategy & Targets, Regu- latory framework (compliance with UN regulations)	Existence of motorways, of non-paved roads, of road tunnels, Existence of guidelines (for design, RSA etc.), Legislation on speeding	Number of regi- stered vehicles, Vehicle age, Technical inspe- ction legislation (maintenance, roadworthiness, overweight, ADR)	Requirements & regulations on drivers' licensing, Drivers' training, Medical exams of drivers, Legislation on alcohol / use of seatbeits / use of helmets	Trauma management sector level of development Number of hospitals / doctors / Intensive Care (IC) beds per population
	2. Transport demand & exposure	Transport Modal Split (road/rail, passenger/freight, private/public), Share of urban areas, Weather conditions	Exposure with regard to road type, Length of road per road type, Share of Motorway length out of the total road network, Number of railway level crossings	Exposure with regard to vehicle type, Share of PTW, HGV / carriage of dangerous goods vehicles in the vehicle fleet	Exposure with regard to age & gender	
	3. Road Safety Measures	Assessment of measures, Data collection & analysis, International comparisons, Vehicle taxation, Road pricing	Treatment of High Risk Sites, Road Safety Audits, Turnel Road Safety Manage- ment, Improve- ment of signage, Installation of road restraint systems, Lighting, Speed limits in urban areasTraffic Calming	Renewal rate of vehicle fleet, Measures for second-hand vehicles, Vehicle related roadside controls, Automated driving	Enforcement, campaigns, Road safety education, Training	e-call, First aid training, Existenc & organisation of trauma centers
	Road Safety     Performance     Indicators	Safety targets, stakeholders' involvement, detail of analysis for intervention selection, economic evaluation	Number of RSAs conducted, Percentage of High Risk Sites treated	Global NCAP score, Mean age of the vehicle fleet per vehicle type, Existence of safety equipment, e-safety	Speeding / Drink & drive infringe- ments, Seatbets use, Helmets use, Driver distraction, Driver fatigue	Emergency response time, Type of field treatment, Speed of treatment in hospital, Number of ambulances pe population, Number of good samaritanians pe population
	5. Fatalities & Injuries	Fatalities / injuries per million inhabitants, fatalities / injuries per million passenger cars, fatalities / injuries per 10 billion passenger-km	Fatalities / injuries in motorways, in 2-lane rural roads, in urban roads	Share of motorcycle fatalities out of the total fatalities	Share of pedestrian / bicyclist / motorcyclist fatalities out of the total fatalities, drink-driving related fatalities	Death rate, Hospitalization in IC Unit, Total length of hospitalization

### Review of accident causalities

- Literature review of existing research on accident casualties was performed for each of the pillars separately.
- Causal relationships between policies or measures and road safety outcomes were summarized.
- In many cases the relationships have not been adequately quantified.
- Very **limited available information** from studies in middle and low-income countries.
- Inter-correlation of road safety measures and policies applied simultaneously may affect the safety effects.
- Some causal relationships identified in literature were found to be **incompatible** with each other.
- A model linking the two layers Economy and Management and Road Safety Measures to the road safety outcomes cannot safely be based only on the literature findings.

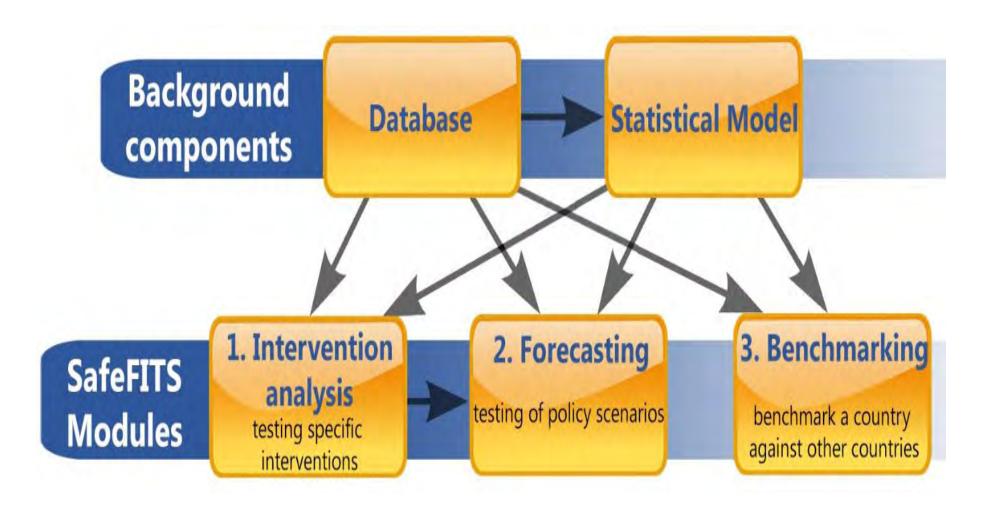

#### Focused review of detailed causalities

- **Priority indicators** were proposed to be included in the SafeFITS model.
- Review on specific quantified causal relations linking these indicators with the road safety outcomes was performed.
- Very **limited available information** from studies in middle and low-income countries.
- In some cases, a **quantitative relation** to estimate an overall accident reduction attributed to a specific indicator is not available.
- Indicators mainly from the economy and management layer are characterized by **complex objectives**.
- Some identified detailed causalities have been based on logical assumptions.

### Overview of the SafeFITS model

### The SafeFITS Database

- Architecture of the project Database
- Data indicators from the five layers:
  - Economy and Management
  - Transport Demand and Exposure
  - Road Safety Measures
  - Road Safety Performance Indicators
  - Fatalities and Injuries

#### Architecture of the Database

- Data from the five layers and the five pillars
- International databases explored: WHO, UN, IRF, OECD, etc.
- Data for 130 countries with population higher than 2,8 million inhabitants
- Data refer to 2013 or latest available year

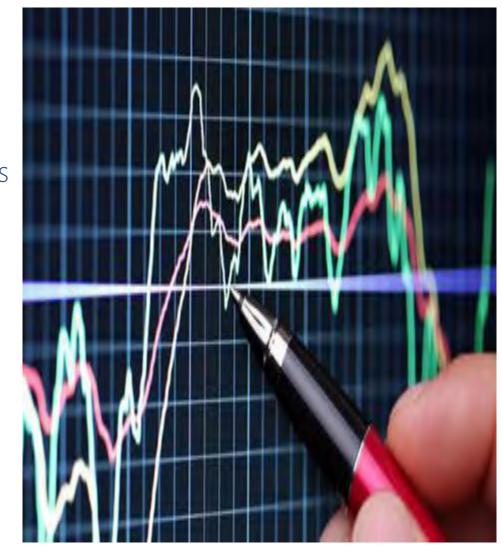

### **Economy and Management**

#### Demographic and Economic Characteristics

- Population (World Bank Database)
- Area (World Bank Database)
- GNI per capita in US dollars (World Bank Database)
- Projected GDP per capita for 2015-2030 in 2010 US dollars (ERS International Macroeconomic Data Set)

#### Road Safety Management Indicators (WHO)

- Existence of RS lead agency
- The lead agency is funded
- Existence of national RS strategy
- The RS strategy is funded
- Existence of RS fatality targets

### Transport Demand and Exposure

#### Roads

- Road network density (IRF)
- Percentage of motorways (IRF)
- Percentage of paved roads (IRF, CIA)

#### **Vehicles** (IRF)

Number of vehicles in use in total and by type of vehicle

#### <u>Traffic</u> (IRF)

- Traffic Volume
- Inland surface passengers transport
- Inland surface freight transport

### Road Safety Measures (1/2)

#### Roads (WHO)

- Road safety audits on new roads
- Existence of speed law
- Max speed limits on urban roads (no speed limits; >50 km/h; ≤50 km/h)
- Max speed limits on rural roads (no speed limits; 100-120 km/h; 70-90 km/h; ≤70 km/h)
- Max speed limits on motorways (no speed limits; ≤100 km/h; 100-120 km/h; ≥120 km/h)

#### <u>Vehicles</u>

- Existence of ADR law (UNECE)
- Vehicle standards include seat-belts, electronic stability control, pedestrian protection (WHO)
- New cars subjected to NCAP (WHO)

#### Post-crash care (WHO)

- Training in emergency medicine for doctors
- Training in emergency training for nurses

### Road Safety Measures (2/2)

#### Road User (WHO)

- Existence of drink-driving law
- Allowed **BAC limits** (3 separate variables for general population, young/novice drivers, commercial drivers)
- Existence of national seat-belt law
- The seat-belt law applies to all occupants
- Existence of national child restraint law
- Existence of national helmet law
- The law requires helmet to be fastened
- The helmet law defines specific helmet standards
- Existence of national law on **mobile phone use** while driving
- The law applies to hand-held phones
- The law applies to hands-free phones
- Existence of penalty point system

### Road Safety Performance Indicators

#### <u>Traffic law enforcement</u> (WHO)

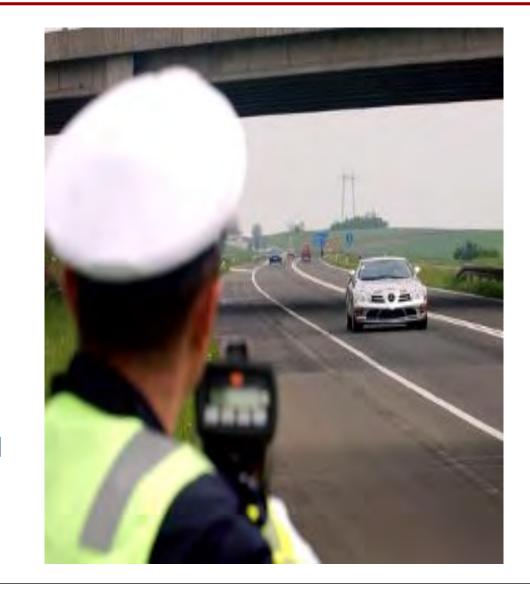

- Assessment of effectiveness of **seat-belt law** enforcement
- Assessment of effectiveness of **drink-driving law** enforcement
- Assessment of effectiveness of **speed law** enforcement
- Assessment of effectiveness of helmet law enforcement

#### Road User (WHO)

- Seat-belt wearing rates in front seats
- Seat-belt wearing rates in rear seats
- Helmet wearing rates driver

#### Post-crash care

- Estimated percentage of **seriously injured patients** transported by ambulance (WHO)
- Number of **hospital beds** per population (World Bank Database)

### Fatalities and Injuries

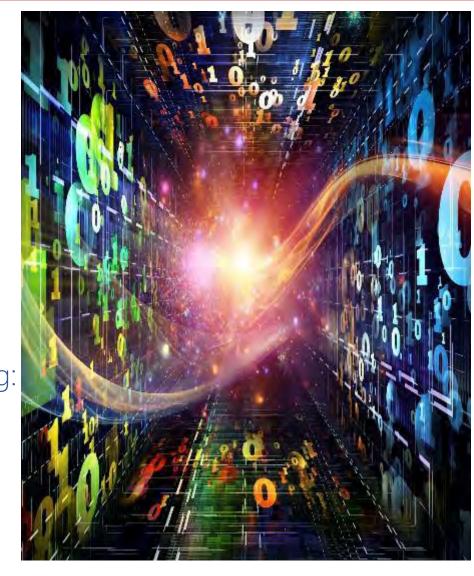

- Reported number of road traffic fatalities (WHO, IRF)
- Estimated number of road traffic fatalities (WHO)
- Estimated road traffic fatality rates per 100.000 population (WHO)
- Distribution of road traffic fatalities by road user type (WHO)
- Distribution of road traffic fatalities by gender (WHO)
- Percentage of road traffic fatalities attributed to alcohol (WHO)

### SafeFITS Database (1/2)

- Wherever data for 2013 were not available, the **latest data** available were used.
- The missing values of each indicator of the countries were filled with **the mean value** of the indicator in their regions.
- The respective information of each variable is **properly** represented in the database for the statistical process.
- Data for most variables were available for almost all countries.
- Low data availability is observed for few variables regarding:
  - the restraint use rates
  - the percentage of fatalities attributed to alcohol
  - the distribution of fatalities by road user type
  - transport demand and exposure indicators

### SafeFITS Database (2/2)

	With	
Number	Variable	Source
1	Population in thousands (2013)  Area (sq km) (2013 or latest available year)	World Bank Database World Bank Database
2 3	Projected Gross Domestic Product per capita in 2010 US \$ (2015-2030)	ERS International Macroeconomic Dataset
4	Gross national income per capita in US \$ (2013 or latest available year)	World Bank Database
5	Percentage of population under 15 years old (2013)	World Bank Database
6	Percentage of population over 65 years old (2013)	World Bank Database
7	Percentage of urban population (2013)	World Bank Database
8	Existence of a road safety lead agency (2013)	WHO, 2015
9	The lead agency is funded (2013)	WHO, 2015
10	Existence of national road safety strategy (2013) The strategy is funded (2013)	WHO, 2015
11 12	Existence of fatality reduction target (2013)	WHO, 2015 WHO, 2015
13	Length of total road network (km) (2013 or latest availbale year)	IRF, 2015
14	Percentage of motorways of total road network (2013 or latest available year)	IRF, 2015
15	Percentage of paved roads of total road network (2013 or latest available year)	IRF, 2015
16	Total number of vehicles in use (2013 or latest availble year)	IRF, 2015
17	Number of passenger cars in use (2013 or latest availble year)	IRF, 2015
18	Number of buses/motorcoaches in use (2013 or latest availble year)	IRF, 2015
19	Number of vans and lorries in use (2013 or latest availble year)	IRF, 2015
20	Number of powered two wheelers in use (2013 or latest availble year)	IRF, 2015
21 22	Total number of vehicle kilometers in millions (2013 or latest available year)	IRF, 2015
22	Total number of passenger kilometers in millions (2013 or latest available year)  Number of road passenger kilometers in millions (2013 or latest available year)	IRF, 2015 IRF, 2015
23 24	Number of rail passenger kilometers in millions (2013 or latest available year)	IRF, 2015
25	Total number of tonnes-kilometers in millions (2013 or latest available year)	IRF, 2015
26	Road Safety Audits on new roads (2013 or latest available year)	WHO, 2015
27	Existence of ADR law (2013)	UNECE
28	Existence of national speed law (2013)	WHO, 2015
29	Maximum speed limits on urban roads (2013)	WHO, 2015
30	Maximum speed limits on rural roads (2013)	WHO, 2015
31	Maximum speed limits on motorways (2013)	WHO, 2015
32	Vehicle standards-seat belts (2013)	WHO, 2015
33	Vehicle standards-seat belt anchorages (2013)	WHO, 2015
34	Vehicle standards-frontal impact (2013)	WHO, 2015
35 36	Vehicle standards-side impact (2013)  Vehicle standards-Electronic Stability Control (2013)	WHO, 2015
36	Vehicle standards-Pedestrian Protection (2013)	WHO, 2015 WHO, 2015
37 38	Vehicle standards-redestrain Frotection (2013)	WHO, 2015 WHO. 2015
39	Existence of national drink-driving law (2013)	WHO, 2015
40	BAC limits less than or equal to 0.05 g/dl (2013)	WHO. 2015
41	BAC limits lower than or equal to 0.05g/dl for young/novice drivers (2013)	WHO, 2015
41 42	BAC limits lower than or equal to 0.05g/dl for commercial drivers (2013)	WHO, 2015
43	Existence of national seat-belt law (2013)	WHO, 2015
44	The law applies to all occupants (2013)	WHO, 2015
45	Existence of national child restraints law (2013)	WHO, 2015
46	Existence of national helmet law (2013)	WHO, 2015
47	Law requires helmet to be fastened (2013)	WHO, 2015
48	Law requires specific helmet standards (2013)	WHO, 2015
49	Existence of national law on mobile phone use while driving (2013)  The law applies to hand-held phones (2013)	WHO, 2015
50	The law applies to hands-free phones (2013)	WHO, 2015 WHO, 2015
50 51 52	Demerit/Penalty Point System in place (2010)	WHO, 2013
53	Training in emergency medicine for doctors (2013)	WHO, 2015
53 54 55	Training in emergency medicine for occors (2013)	WHO, 2015
55	Effectiveness of seat-belt law enforcement (2013)	WHO, 2015
56	Effectiveness of drink-driving law enforcement (2013)	WHO, 2015
57	Effectiveness of speed law enforcement (2013)	WHO, 2015
58	Effectiveness of helmet law enforcement (2013)	WHO, 2015
59	Seat-Belt wearing rate-Front (2013 or latest available year)	WHO, 2015
60	Seat-Belt wearing rate-Rear (2013 or latest available year)	WHO, 2015
61	Helmet wearing rate-driver (2013 or latest available year)	WHO, 2015
62	Estimated % seriously injured patients transported by ambulance (2013)  Number of hospital beds per 1,000 population (2012 or latest available year)	WHO, 2015
63 64	Number of nospital beds per 1,000 population (2012 or latest available year)  Reported number of road traffic fatalities (2013 or latest available year)	Wold Bank Database IRF, 2015
65	Estimated number of road traffic fatalities (2013 or latest available year)	WHO, 2015
66	Distribution of fatalities by road user(%)-Drivers/passengers of 4-wheeled vehicles (2013 or latest available year)	WHO, 2015
67	Distribution of fatalities by road user(%)-Drivers/passengers of motorized 2- or 3-wheelers (2013 or latest available year)	WHO, 2015
68	Distribution of fatalities by road user(%)-Cyclists (2013 or latest available year)	WHO, 2015
69	Distribution of fatalities by road user(%)-Pedestrians (2013 or latest available year)	WHO, 2015
70	Distribution of fatalities by gender(%)-male (2013 or latest available year)	WHO, 2015
71	Distribution of fatalities by gender(%)-female (2013 or latest available year)	WHO, 2015
72	Attribution of road traffic deaths to alcohol (%) (2013)	WHO, 2015

### SafeFITS Model Development

- Data Analysis Methodology
- Estimation of Composite Variables
- Development of Statistical Model
   Correlating road safety outcomes with composite variables
- Model Validation
- Customisation for Groups of Countries

### Data Analysis Methodology

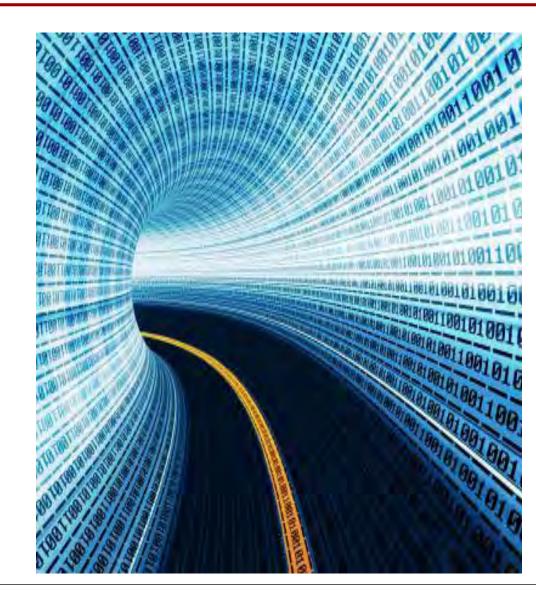

- Two-step approach of statistical modeling:
  - Estimation of composite variables (factor analysis) in order to take into account as many indicators as possible of each layer
  - Correlating road safety outcomes with indicators through composite variables by developing a regression model
- For efficient forecasting, it is necessary to make explicit consideration of time dimension
- Identification of groups of countries for better description by dedicated analyses

### Estimation of composite variables

- By using composite variables, reduction of the dimensionality of the analysis is achieved, while exploiting as many indicators as possible, allowing for a robust model.
- Each layer can be described by a composite variable.
- Factor analysis is most appropriate for the estimation of composite variables.

### Calculation of composite variables

- Factor analysis was attempted and implemented on all layers of the road safety system.
- For the estimation of composite variables 3 approaches were tested:
  - 1. General factor analysis
  - 2. Factor analysis per layer
  - 3. Factor analysis, constrained to yield one factor per layer
- Calculation of composite variables through the 3<sup>rd</sup> approach was selected for the layers:
  - Economy and Management
  - Transport Demand and Exposure
  - Road Safety Measures
  - Performance Indicators
- For fatalities and injuries indicators, the **fatality rate per population** was selected as main dependent variable.

### Estimation of composite variables in SafeFITS

#### Estimation of "composite variables scores" through the following equations:

- [Fatalities and Injuries] =  $\alpha_1$  \* (Fatalities and Injuries Indicator 1) +  $\alpha_2$  \* (Fatalities and Injuries Indicator 2) + ...+  $\alpha_i$  \* (Fatalities and Injuries Indicator 3) + e
- [RSPI] =  $\beta_1$  \* (RSPI Indicator 1) +  $\beta_2$  \* (RSPI Indicator 2) + ...+  $\beta_k$  \* (RSPI Indicator 3) +  $\nu$
- [Road Safety Measures] =  $\gamma_1$  \* (Road Safety Measures Indicator 1) +  $\gamma_2$  \* (Road Safety Measures Indicator 2) + ...+  $\gamma_k$  \* (Road Safety Measures Indicator 4) + w
- [Transport demand & exposure] =  $\delta_1$  \* (Transport demand & exposure Indicator 1) +  $\delta_2$  \* (Transport demand & exposure Indicator 2) + ...+  $\delta_1$  \* (Transport demand & exposure 1) + y
- [Economy & Management] =  $\epsilon_1$  \* (Economy & Management Indicator 1) +  $\epsilon_2$  \* (Economy & Management Indicator<sub>2</sub>) + ...+  $\epsilon_m$  \* (Economy & Management Indicator<sub>m</sub>)+ z

#### Calculation of composite variables – Economy and Management

[Comp\_EM] = -0.250 (EM2\_lt15yo) + 0.229 (EM3\_gt65yo) + 0.228 (EM4\_UrbanPop) + 0.224 (EM7\_NationalStrategy) + 0.221 (EM8\_NationalStrategyFunded) + 0.222 (EM9\_FatalityTargets)

## Indicator loadings and coefficients on the estimated factor (composite variable) on Economy and Management

	Component		
	Loadings	Score coefficients	
EM1_Popdensity	,091	,029	
EM2_lt15yo	-,778	-,250	
EM3_gt65yo	,714	,229	
EM4_UrbanPop	,709	,228	
EM5_LeadAgency	,284	,091	
EM6_LeadAgencyFunded	,226	,073	
EM7_NationalStrategy	,697	,224	
EM8_NationalStrategyFunded	,626	,201	
EM9_FatalityTargets	,692	,222	

#### Calculation of composite variables – Transport Demand and Exposure

[[Comp\_TE] = 0.161 (TE1\_RoadNetworkDensity) + 0.149 (TE2\_Motorways) + 0.238 (TE3\_PavedRoads) + 0.272 (TE4\_VehiclesPerPop) + 0.267 (TE5\_PassCars) - 0.221 (TE7\_PTW) - 0.117 (TE10\_PassengerFreight)

## Indicator loadings and coefficients on the estimated factor (composite variable) on Transport Demand and Exposure

	Component		
	Loadings	Score coefficients	
TE1_RoadNetworkDensity	,497	,161

#### Statistical model formulation

#### Generic statistical model formulation between composite variables

• Log[Fatalities & Injuries]<sub>i</sub> =  $A_i$  +  $K_i$  \* [Economy & Management]<sub>i</sub> +  $L_i$  \* [Transport demand & Exposure]<sub>i</sub> +  $M_i$  \* [Road Safety Measures]<sub>i</sub> +  $N_i$  \* [RSPI]<sub>i</sub> +  $\upsilon_i$ 

#### <u>Time-dependent statistical model formulation</u>

• Log(Fatalities per Population) $t_i = A_i + Log(Fatalities per Population)_{(t-\tau)} + B_i * GDPt_i + K_i * [Economy & Management] + L_i * [Transport demand & Exposure] t_i + M_i * [Road Safety Measures]t_i + N_i * [RSPI]t_i + \varepsilon_i$ 

#### Achieving:

- Medium-term forecasting approach, on the basis of the developments over the last few years
- Long-term forecasting, by applying the same approach on the future forecasted outcomes

#### Final Statistical Model

The **optimal performing model** for the purposes of SafeFITS

- Dependent variable is the logarithm of the fatality rate per population for 2013
- The main explanatory variables are the respective logarithm of fatality rate in 2010 and the respective logarithm of GDP per capita for 2013
- Four **composite** variables: the economy & management, the transport demand and exposure, the measures, and the SPIs

	B Std. Error	95% Confidence Interval		Hypothesis Test			
Parameter			Lower	Upper	Wald Chi- Square	df	p-value
(Intercept)	1,694	,2737	1,157	2,230	38,291	1	<,001

p-value	<,001						

#### Statistical Model Assessment

In order to assess the model, a comparison of the observed and the predicted values was carried out:

- The mean absolute prediction error is estimated at 2.7 fatalities per population, whereas the mean percentage prediction error is estimated at 15% of the observed value.
- The model is of very satisfactory performance as regards the good performing countries (low fatality rate) and of quite satisfactory performance as regards the medium performing countries.

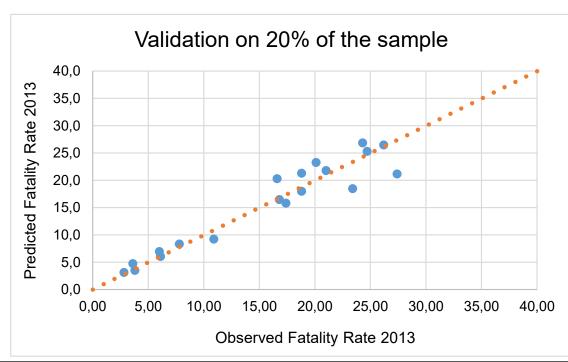

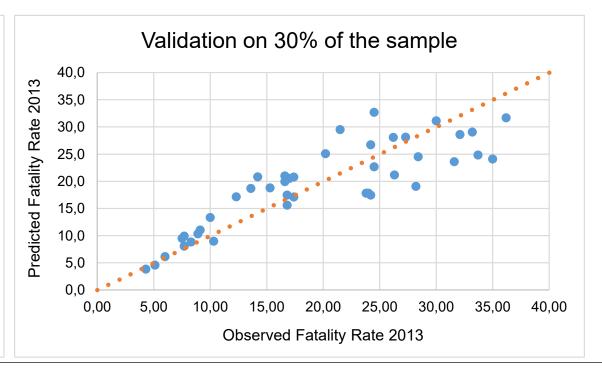

#### Statistical Model Validation

In order to validate the model, a cross-validation was carried out with two subsets:

- 80% of the sample was used to develop (fit) the model, and then the model was implemented to predict the fatality rate for 2013 of the 20% of the sample not used
- 70% of the sample was used to develop (fit) the model, and then the model was implemented to predict the fatality rate for 2013 of the 30% of the sample not used

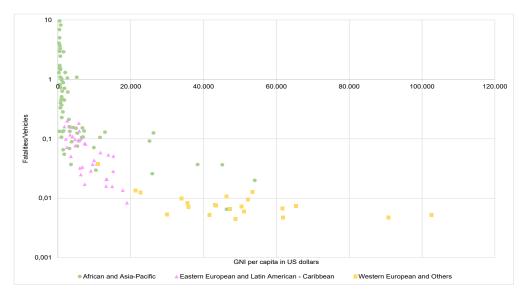

### Customisation for Groups of Countries

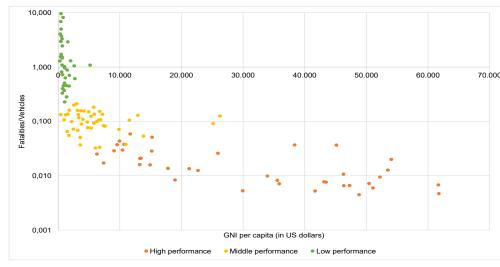

#### Classification based on **geopolitical criteria**:

- Region 1: African and Asia-Pacific countries
- Region 2: Eastern European and Latin American & Caribbean countries
- Region 3: Western European and developed countries

## Classification based on **economic** and **road safety performance** criteria:

- Region 1: Low performance countries
- Region 2: Middle performance countries
- Region 3: High performance countries

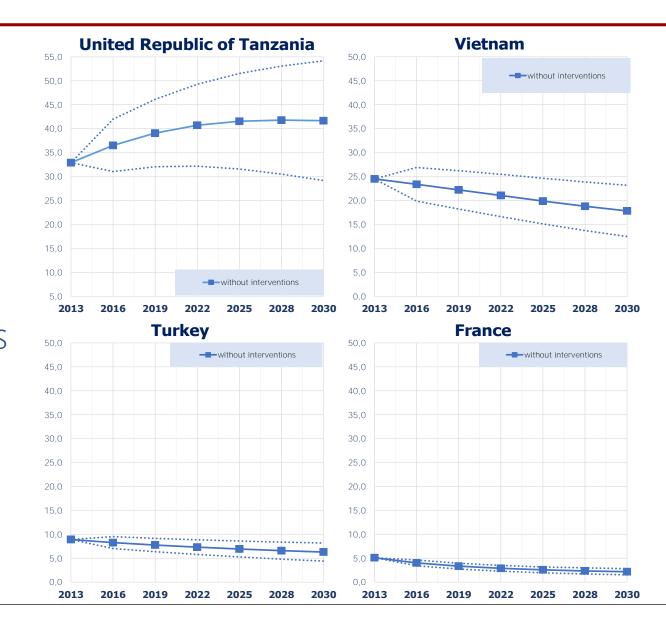

### Model Application

Examples of statistical model application:

- one low performance country
- two middle performance countries
- one high performance country

### SafeFITS Model Demonstration

The overall model implementation includes 3 distinct steps:

- Step 1 Countries Benchmark
- Step 2 Forecast
- Step 3 Report Generation

### Things to know when using the SafeFITS model

- Data and analysis methods have some limitations:
  - Fatality data are in some cases estimated numbers, corrected for under-reporting.
  - Missing values were addressed by imputation.
  - The available data for several indicators were **not detailed**.
- The **optimal use** of the model depends on a number of recommendations and rules:
  - The model provides overall forecasts of **short-term developments**, which might be extrapolated in the future.
  - The model includes many indicators which are correlated, thus testing combinations of "similar" interventions is recommended.
  - The model may not fully capture the effects on countries with very particular characteristics.
  - Developing countries are expected to be more sensitive in the testing of interventions than developed ones.

### Step 1 (Benchmark) – Input

#### Objective:

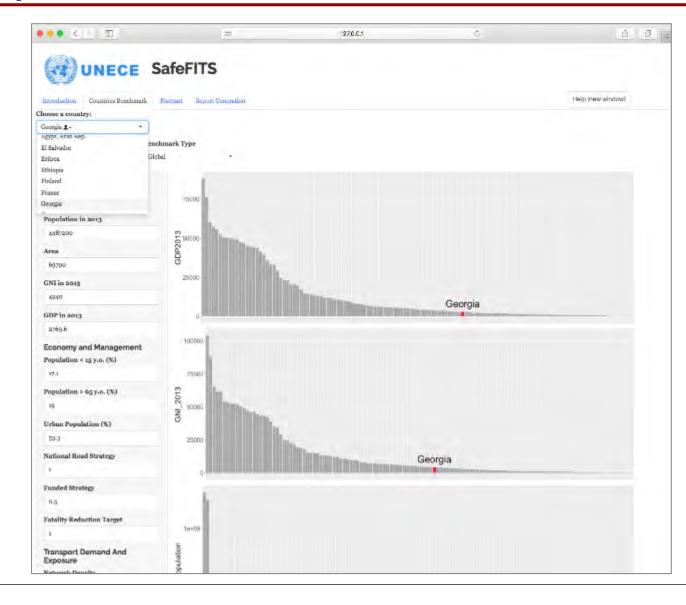

To provide the user general information concerning the country for the base year.

#### User input:

The user has the option to select a country

#### Analysis:

The outputs are based only on the database and no statistical modeling implementation is taking place.

### Step 1 (Benchmark) - Output

- Values of all indicators for the requested country and year
- Indicators are divided in categories
- Road safety performance results including:
  - Fatalities per population
  - General rank the overall ranking of the selected country
  - Region rank the regional ranking of the selected country
- Benchmarking results including:
  - Reactive diagrams presenting a benchmark of the base year situation for a selected category
  - Benchmarking will take place on a global and regional scale

### Step 2 (Forecast) - Input

#### Objective:

To forecast the road safety performance of a country based on a series of intervention scenarios that the user can implement

#### **User input:**

The user selects the reference year of the forecast and then different sets of interventions:

- no interventions set
- 3 different sets of interventions

#### Analysis:

The SafeFITS model is implemented for the year of reference on the basis of the intervention set selected

### Step 2 (Forecast) - Output

#### Road safety results

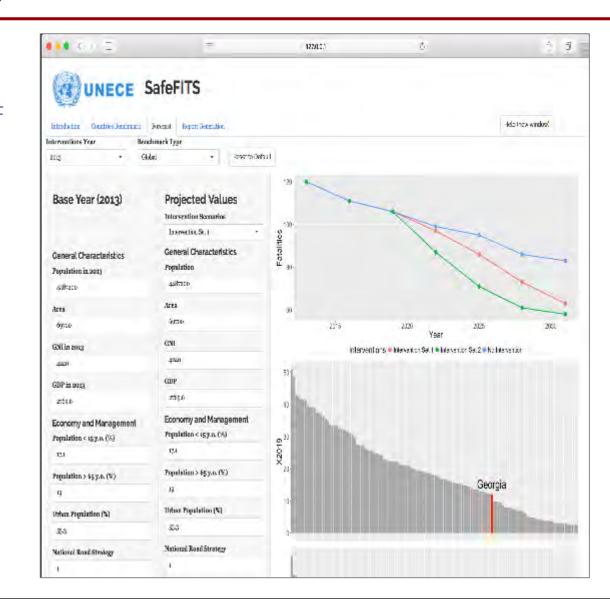

- Fatalities per population on the year of reference
- Change of fatalities per population on the year of reference compared to 2013
- General ranking of the country on the year of reference
- Regional rank on the year of reference

#### **Forecasting**

The trend for the variable fatalities per population through the years (2013-2030), alongside with the confidence intervals.

#### **Benchmarking**

- Overall ranking
- Regional ranking

### Step 3 (Report Generation)

#### Objective:

The optional development of reports that can be downloaded for follow-up/offline use

#### <u>User input:</u>

The user selects which parts of the analysis she/he wants to have exported, as well as the file format in which the report will be generated

#### Output:

Reports in PDF, html, MS Word format with the analyses selected.

### Next Steps

- Pilot operation phase: Model tested by selected users and revised at the end of the first year
- Annual or bi-annual revisions of all SafeFITS components (knowledge base, database and statistical models)
- Monitor global developments in data availability and accuracy, so that the SafeFITS database is updated regularly and continuously.
- SafeFITS tool will be further enhanced by continuously taking into account users' feedback.
