The Road Safety Strategy in Greece

Katerina Folla, George Yannis
NTUA, Greece
Presentation Outline

1. Key Road Safety Figures
2. Road Safety Strategy in Greece (2001-2010)
3. Road Safety Strategic Plan (2011-2020)
4. Concluding Remarks
Key Road Safety Figures
# Basic Road Safety Figures

### Injury Road Accidents

</tbody>
</table>

---

Road fatalities in Greece have decreased by **44%** since 2010, however injury road accidents decreased only by **28%**. The rate of fatalities per number of vehicles has **decreased by 46% since 2010**. A stagnation of road fatalities in 2019 is observed.
Road Safety Evolution and Target

- **700 fatalities** in 2018: the best ever performance since 1965
- The most impressive road safety improvement in the EU since 2010: **43%** road fatalities decrease
- The respective decrease in the EU was **22%** over the same period
- In 2019, the number of road fatalities is estimated to remain stable
- Around **70 lives to be saved** to reach the 2020 target
Road Safety in Greece

- Significant part of the fatalities reduction since 2010 is attributed to the **economic crisis**

- Several **positive activities** also contributed to this improvement:
  - great **improvement of the main road network** (from 750km of motorways in 2007 to 2.200 km in 2018)
  - several Local Authorities implemented **city mobility and safety plans**
  - **implementation of all EU Directives** and all procedures is always tighter
  - new **traffic fines scheme** (2018) based on infringement safety importance and offenders’ income
  - introduction of **vehicle control inspection run by private entities**; very efficient against corruption
Road Safety Strategy in Greece (2001-2010)
Road Safety Strategic Plans (2001-2010)

- **1st Strategic Plan** for the Improvement of Road Safety in Greece (2001-2005)
  - **Target**: decrease of 20% up to 2005 and 40% up to 2015 in road fatalities compared to 2000.
  - **Actual result**: decrease of 18.6%

- **2nd Strategic Plan** for the Improvement of Road Safety in Greece (2006-2010)
  - **Target**: decrease the number of road fatalities, in 2010, by 50%, compared to 2000.
  - **Actual result**: decrease of 37.1%
Lessons from the implementation of road safety strategies in Greece 2001 - 2010

➢ The low road safety level in Greece, with more than 15,000 accidents and 1,500 yearly fatalities, and related social costs exceeding 4 billion euro, was strongly associated with the lack of an integrated national road safety policy.

➢ The lack of a central authority in charge of road safety management, together with some overlap and ambiguity in the responsibilities of the several involved authorities resulted in a lack of systematic and long-term road safety planning and monitoring.

➢ Road safety programmes and measures were often poorly implemented, and seldom monitored or evaluated.
Lessons from the implementation of road safety strategies in Greece 2001 - 2010

➢ The measures of the 1st and 2nd National Strategic Plan were not efficiently implemented beyond 2003, resulting in a stabilization of the number of fatalities and an increase of the deviation from the adopted national (and EU) target for reduction of fatalities.

➢ Additional factors related to the current low road safety level in Greece concern not only the aggressive and risk-taking behaviour, together with a low compliance to traffic rules of Greek drivers, but also the significantly high traffic of motorcycles and pedestrians. Young drivers and two-wheeler riders are particular high-risk groups.
Road Safety Strategic Plan (2011-2020)
RS Strategic Plan in Greece, 2011-2020

- Developed by the Department of Transportation Planning and Engineering of NTUA for the Ministry of Infrastructure, Transport and Networks.

- **1st phase:** national and international assessment, targets and structure

- **2nd phase:** measures, programmes, implementation plan
Steps for the development of the Strategic Plan

- Assessment of the implementation of the previous Road Safety Strategic Plans
- Identification, analysis and assessment of critical road safety parameters in Greece
- Identification, analysis and assessment of European and international road safety developments
- Setting up the targets and the structure of the Strategic Plan
- Development of road safety programmes and measures
- Development of the framework for the implementation, monitoring and assessment
The road safety target 2011 - 2020

- Adoption of the new EU target for reducing the number of road fatalities by **50% by 2020** comparing to those in 2010.
  - 650 lives to be saved annually (from 1,300 fatalities in 2010 to 650 fatalities in 2020).
  - **Estimated actual result:** decrease of 43%

- Intermediate targets
  - **2010-2014:** Decrease of 90 fatalities per year
    - **Actual result:** average annual decrease of 115 fatalities
  - **2014-2020:** Decrease of 50 fatalities per year
    - **Estimated actual result:** average annual decrease of around 60 fatalities
The vision: Developing Road Safety Culture

- Introduce road safety values, attitudes, beliefs, expectations, decisions and guide and **motivate cultural-based behaviors** in the Greek society.

- Focus not only to road safety culture of the driving population, but also to **road safety culture of the authorities** in charge of planning, implementing and enforcing road safety policy.

- A **proactive, long-term focus** is needed to cultivate and sustain road safety culture transformation, including traffic education and engagement of the mass media.

- **Traditional interventions must be combined with cultural-based interventions** involving changes in attitudes and perceptions of normative behaviors at the community and individual levels.
Structure of the National RS Strategic Plan (1/3)

Programme 1.
TRAFFIC EDUCATION
MINISTRY OF EDUCATION

Programme 2.
ROAD SAFETY ENFORCEMENT
MINISTRY OF CITIZEN PROTECTION

Programme 3.
SAFE DRIVERS
MINISTRY OF INFRASTRUCTURE TRANSPORT & NETWORKS

Programme 4.
SAFE ROAD INFRASTRUCTURE

Programme 5.
SAFE VEHICLES

Programme 6.
DIRECT ASSISTANCE TO CASUALTIES
MINISTRY OF HEALTH

ROAD SAFETY MANAGEMENT
SPECIAL PERMANENT PARLIAMETARY COMMITTEE ON ROAD SAFETY
INTER-MINISTRY COMMITTEE ON ROAD SAFETY
NATIONAL ROAD SAFETY COUNCIL
SPECIAL SECRETARIAT ON ROAD SAFETY

PRIME MINISTER
MINISTRY OF FINANCE

Establishing Targets
Defining Programmes
Budget Distribution
Monitoring Progress
Communication

13 REGIONS
325 MUNICIPALITIES
RESEARCH CENTRES
GOVERNMENTAL ORGANISATIONS
Structure of the National RS Strategic Plan (2/3)

- **The Road Safety Inter-Ministry Committee** is in charge for:
  - setting and updating the targets
  - the approval of the programmes
  - securing the budget
  - the appropriate functioning of the Special Secretariat
  - accountability to the Prime Minister and the Parliament

- **The Road Safety Special Secretariat** is in charge for:
  - preparing the programmes
  - the budget distribution
  - monitoring progress
  - communication
  - accountability to the Inter-Ministry Committee
Road Safety **Inter-Party Committee of the Parliament** controls the performance of the Road Safety Inter-Ministry Committee

**Ministries, Regional and Municipal Authorities**, are in charge for:
- preparing the measures
- implementing the measures
- accountability to the Road Safety Special Secretariat

**Ministries of Finance and of Interior** participate and support the Inter-Ministry Committee and are in charge to secure the budget and the cooperation of the regional and Municipal Authorities

The **National Road Safety Council** has an advisory role for all issues of the competence of the Inter-Ministry Committee
The six road safety programmes

- In each programme, there are foreseen:
  - specific annual targets
  - specific budget
  - specific measures
  - specific timelines

- The responsibility for the implementation of every measure belongs to:
  - the Ministries
  - the Regional Authorities
  - the Municipal Authorities
  - the research centres and the NGOs

- Budget distribution is linked with the degree of implementation and their efficiency.
Overall Assessment of the RS Strategic Plan

- The targets of the 3rd RS Strategic Plan are close to be reached, despite the partial implementation of the programmes.

- Authorities and Society have not given the necessary priority to the problem of road accidents.

- Public administration deficiencies limit significantly the efficiency of any road safety measures (lack of safe system approach).

- Lack of accountability due to overlap of duties and responsibilities.
Key Challenges

- The **significant reduction of road casualties** during the last decade, mainly attributed to the economic crisis and the significant upgrade of the road network indicates that there is a **great potential for further improvements**

- The **consistent and continuous implementation** of the priority measures by all parties involved at national, regional and local level is not only a tool for the achievement of the targets, but also a challenge for citizens and authorities to **work together** for a significant improvement of road safety level in Greece
Prerequisites for the success

- **Strong political will** at the highest political level and **financial support** in order to activate the necessary mechanisms for the efficient implementation of the Strategic Planning.

- **Intensification of enforcement** by the Traffic Police with emphasis on the most dangerous behavioural offenses.

- **Systematic monitoring** of the implementation of actions and of the factors affecting the road safety level (through KPIs).

- Development and implementation of an **effective road infrastructure safety management system**.

- Design and implementation of an **integrated policy to promote safe driving behaviour**.
Conclusions

- The road safety level in a country or a region reflects the culture in this country or region and it is linked to the efforts on time and resources put.

- It is fundamental duty of the each State to protect citizens’ lives that are literally lost in vain in road accidents just because the issue of Road Safety is not dealt within a scientific and responsible way.
The Road Safety Strategy in Greece
