Impact of Median Jersey Barriers in the Design of Compound Alignments

Stergios Mavromatis, Anastasios Dragomanovits, Panagiotis Papantoniou, Panagiotis Pasias, George Yannis
National Technical University of Athens

3D Highway Geometry

- 2 Independent and mostly uncorrelated 2D stages
 - horizontal alignment
 - vertical alignment
- 2D approach associated with design misconceptions affecting design performance adversely
 - typical case: SSD

Current Practice

- 2D Approach
 - efforts to overcome this incorrect SSD determination
 - coordination between horizontal and vertical curve positioning
 - not all design cases are addressed

Left Curved Divided Highways

- Median barriers
 - increase level of safety
- Necessity for SSD adequacy
- No Explicit Process Provided
 - no assurance whether barrier height and/or vertical curve do not obstruct driver's line of sight

Left Curved Divided Highways – SSD Adequacy Breakpoint

$$SSD_{\text{DEMANDED}} \leq SSD_{\text{AVAILABLE}}$$

- Options
 - determine the examined curve's inferred safe speed
 - define the inner shoulder width for a desired speed

Objectives

- Deliver **analytical tool** for SSD assessments
- **Quantify safety impact** of median Jersey barriers during emergency braking conditions on compound alignments
 - left horizontal curves (R)
 - crest vertical curves (H_k)
- **Identify** areas of **interrupted vision lines** between driver and object
- Examine **interaction** of utilized **design parameters**

SSD Assessment

(1/2)

- RAA 2008 Design Guidelines
 - $V = 130 \text{ km/h}$
 - $t_{\text{perception-reaction}} = 2.0 \text{ sec}$, $a = 3.7 \text{ m/sec}^2$
 - $h_{\text{driver's eye}} = h_{\text{object}} = 1.00 \text{ m}$
 - crest vertical curve grade boundary values: $s = \pm 4.0\%$
- Passing lane width = 3.50m
- Inner shoulder width = 0.75m
- NJ median barrier (0.90m high)
- Variety of horizontal – vertical parameters

SSD Assessment

(2/2)

$$SSD_{\text{DEMANDED}} \leq SSD_{\text{AVAILABLE}}$$

- 3D SSD_{DEMANDED}
 - enriched point mass model
 - actual values of grade (vertical curves)
 - friction variation (vehicle cornering)
- 3D $SSD_{\text{AVAILABLE}}$
 - driver's line of sight towards object height

$SSD_{AVAILABLE}$ (Station A)

$SSD_{AVAILABLE}$ (Station A + calc. step)

$SSD_{AVAILABLE}$ (Station A) vs $SSD_{AVAILABLE}$ (Station A + calc. step)

SSD Modeling Proposal

(1/3)

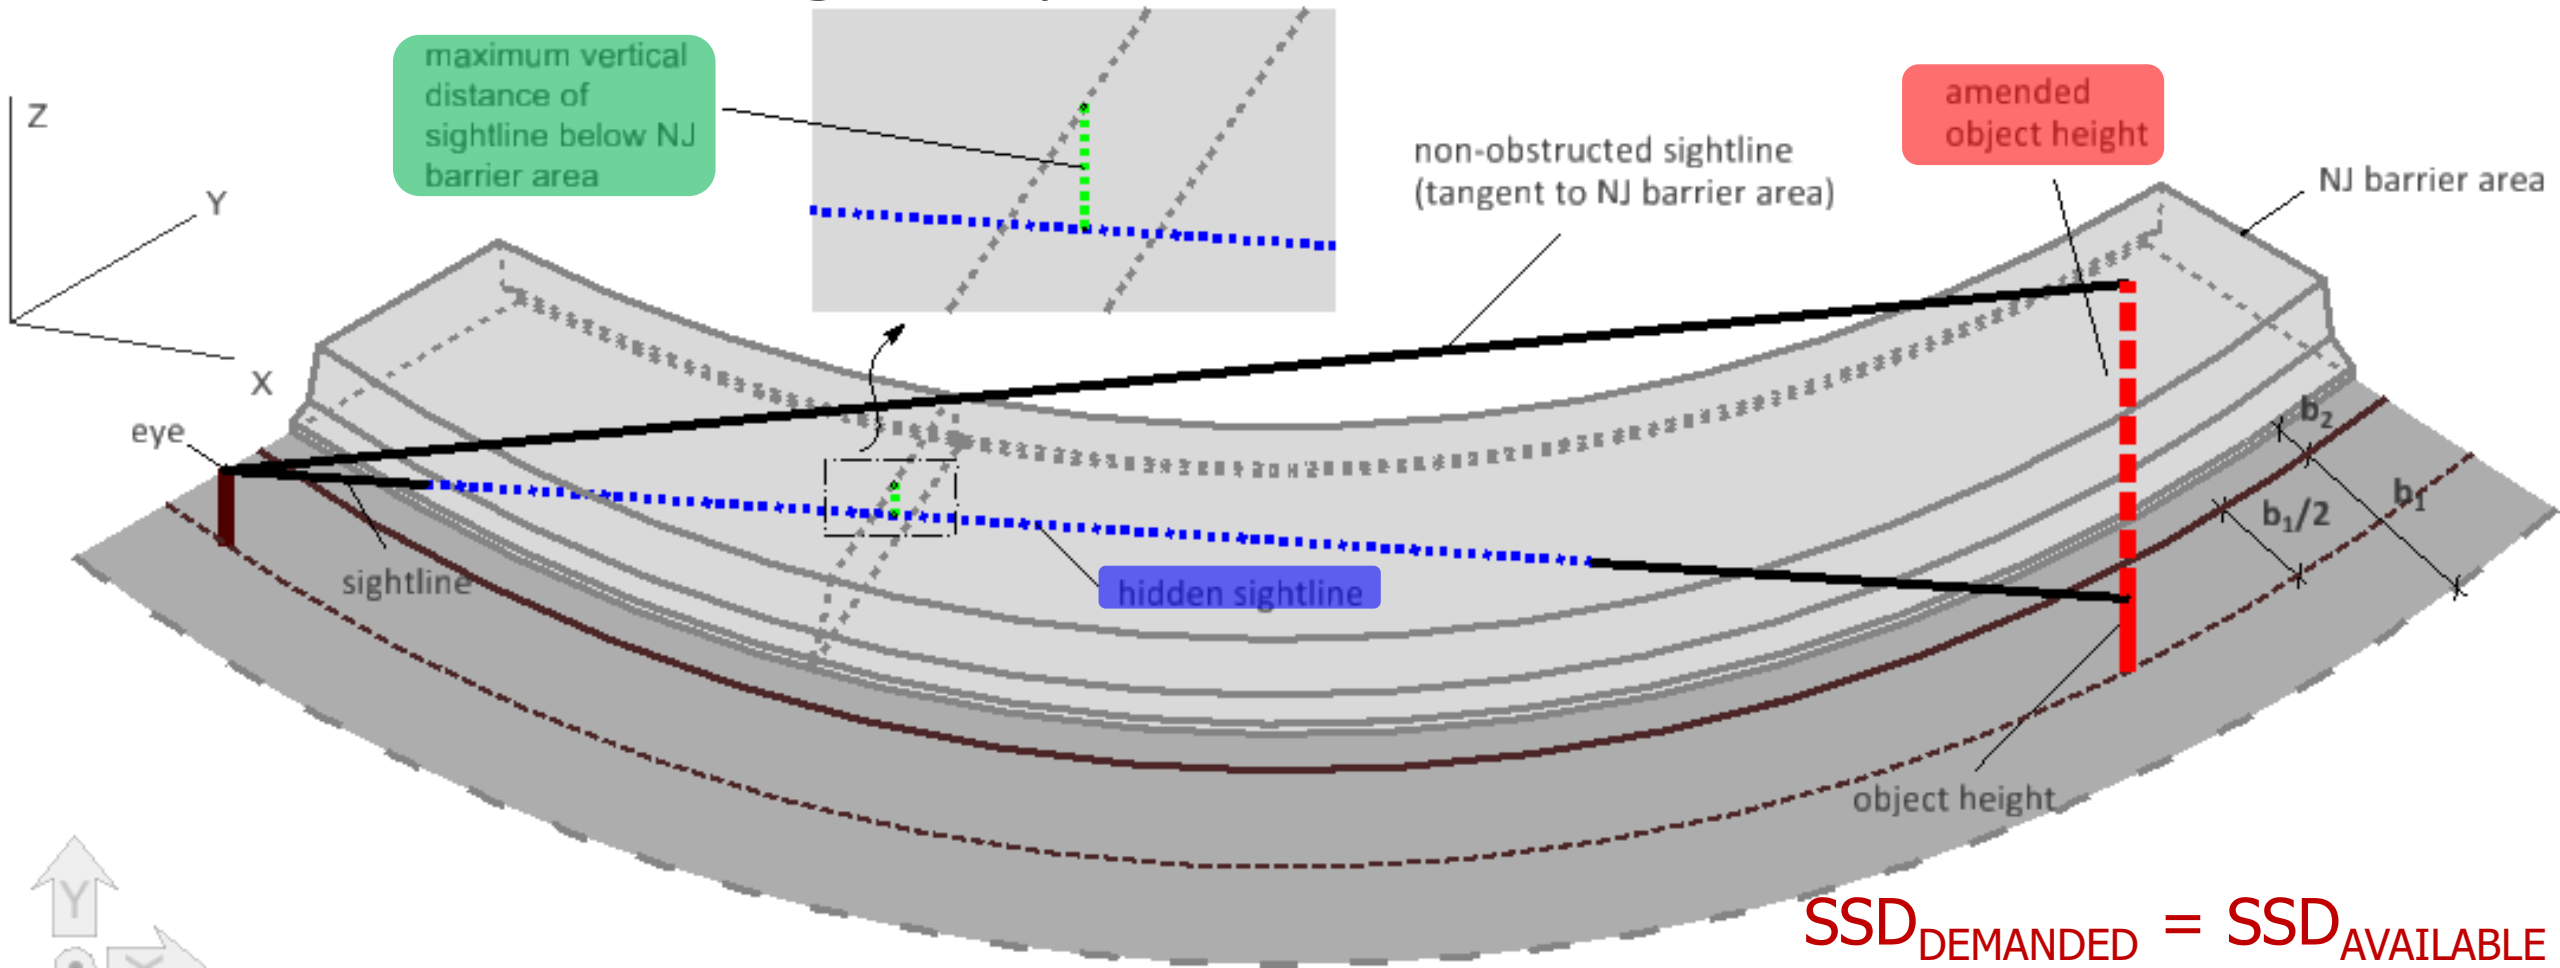

SSD Modeling Proposal

(2/3)

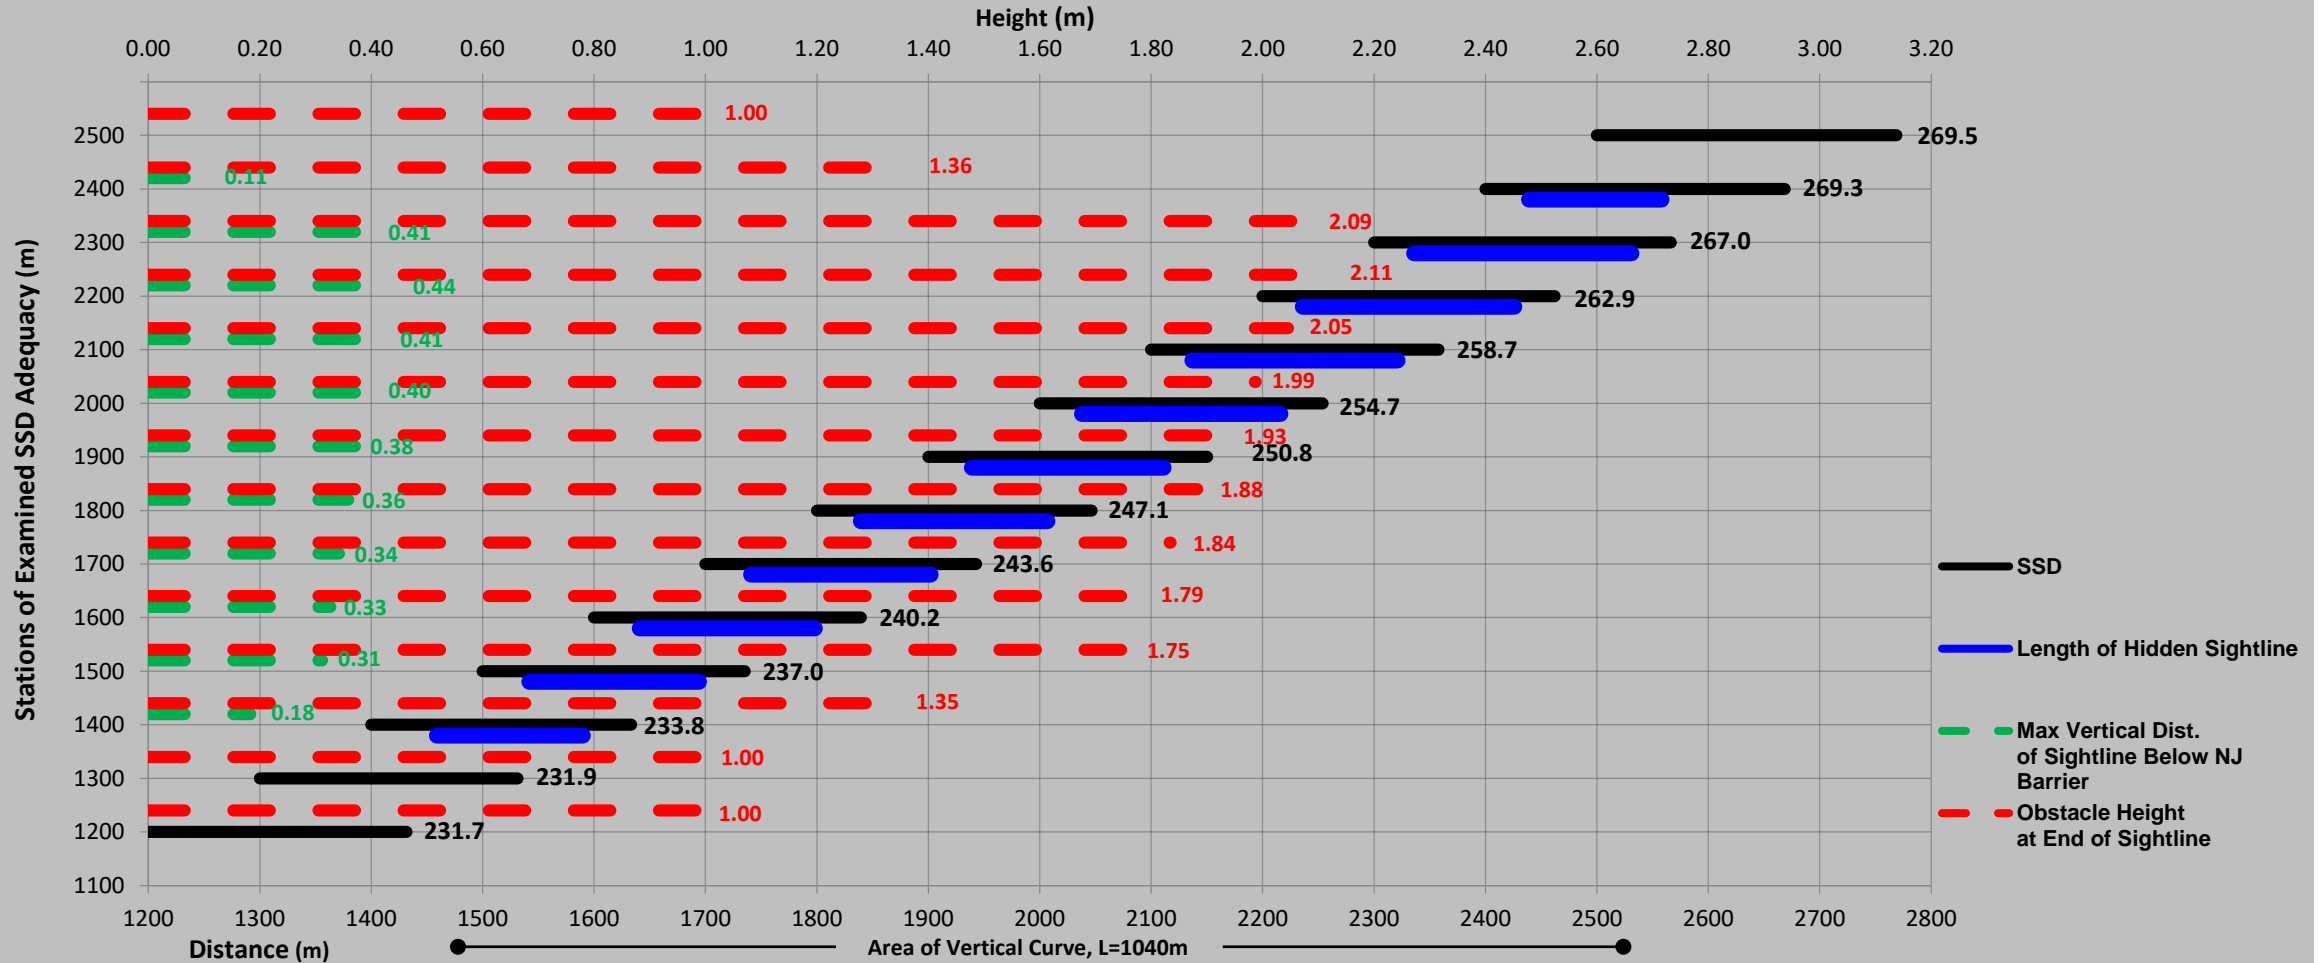

SSD Modeling Proposal

(3/3)

$$SSD_{DEMANDED} = SSD_{AVAILABLE}$$

Output Data (R=1500m, $H_k=13000\text{m}$, $s=\pm 4.0\%$)

Output Data ($R=1500\text{m}$, $H_k=13000\text{m}$, $s=\pm 4.0\%$)

Output Data ($R=1500\text{m}$, $H_k=13000\text{m}$, $s=\pm 4.0\%$)

Output Data ($R=1500\text{m}$, $H_k=13000\text{m}$, $s=\pm 4.0\%$)

24 Examined Alignments

- SSD_{DEMANDED} reduction (%)
 - $h_{\text{object}} = 1.00\text{m}$

	CVCR (m)				
		13000	20000	25000	40000
R (m)	900	>39%	>25%	>16%	0%
	1500	>32%	>25%	>16%	0%
	2000	>22%	>22%	>16%	0%
	2500	>12%	>12%	>12%	0%
	3000	4%	4%	4%	0%
	3500	0%	0%	0%	0%

Can We Reduce $SSD_{DEMANDED}$?

- Introduction of:

“tolerable road length not visible to the driver”

- $SSD_{AVAILABLE} = SSD_{DEMANDED}$ reduced by 9%-12%
- deceleration rate $3.7\text{m/sec}^2 \rightarrow 4.3\text{m/sec}^2$

Acceptable Arrangements of Compound Alignments

• SSD Adequacy

- $V=130\text{km/h}$
- $s=\pm 4.0\%$
- $a=4.3\text{m/sec}^2$
- $h_{\text{driver's eye}} = h_{\text{object}} = 1.00\text{m}$

Note: ✓ acceptable arrangements, ✓* acceptable arrangements for exit grades not below $s = -2.5\%$,
✗ unacceptable arrangements

	CVCR (m)				
		13000	20000	25000	40000
R (m)	900	✗	✗	✓*	✓
	1500	✗	✗	✓*	✓
	2000	✗	✗	✓*	✓
	2500	✓	✓	✓	✓
	3000	✓	✓	✓	✓
	3500	✓	✓	✓	✓

Conclusions

- 24 compound alignments examined ($V=130\text{km/h}$)
- Extensive SSD shortage areas defined
- Introduction of:
“tolerable road length not visible to the driver”
- Additional work
 - examine more speed values
 - optimize effect of additional parameters involved
 - inner shoulder width
 - median barrier type for certain cases
(e.g. bridge – tunnels, etc.)
 - night time driving
 - issues associated to human factors

Thank You
