# Smart city mapping for safer and eco driver behaviour

**Armira Kontaxi**

Transportation Engineer, PhD Candidate

Together with:

Apostolos Ziakopoulos, Dimitrios Nikolaou, George Yannis

# The SmartMaps project

## ➤ Project partners:

- **National Technical University of Athens**, Department of Transportation Planning and Engineering  
[www.nrso.ntua.gr](http://www.nrso.ntua.gr)
- **OSeven Telematics** [www.oseven.io](http://www.oseven.io)
- **Global Link** [www.globallink.gr](http://www.globallink.gr)

## ➤ Duration of the project:

- 30 months (June 2021 – December 2023)

## ➤ Operational Program:

- "Competitiveness, Entrepreneurship and Innovation" (EPAnEK) of the National Strategic Reference Framework (NSRF) – 2<sup>nd</sup> iteration

smartmaps

# Background

- **Technological advancements** during recent decades have led to the development of a **wide array of tools and methods** to record driving behaviour and measure various aspects of driving performance
- **Smartphones** and data obtained from their sensors are increasingly used as informative devices for **monitoring driver behaviour**
- In order to effectively integrate **road network** distances and to precisely estimate **crash risk** in each location, several spatial statistical approaches and **visualization tools** have been implemented in the literature

# Objectives

- Exploitation of large-scale **spatio-temporal data** from smartphone sensors
- **Development of smart driver behaviour maps** with online information on safety conditions and eco-driving (by reducing fuel consumption)
- Creation of a **comprehensive tool to promote safe driving behaviour** with application in Greece and around the world

# Data Collection

## Road Geometry Data (OpenStreetMap)

- Length
- Curvature
- Slope

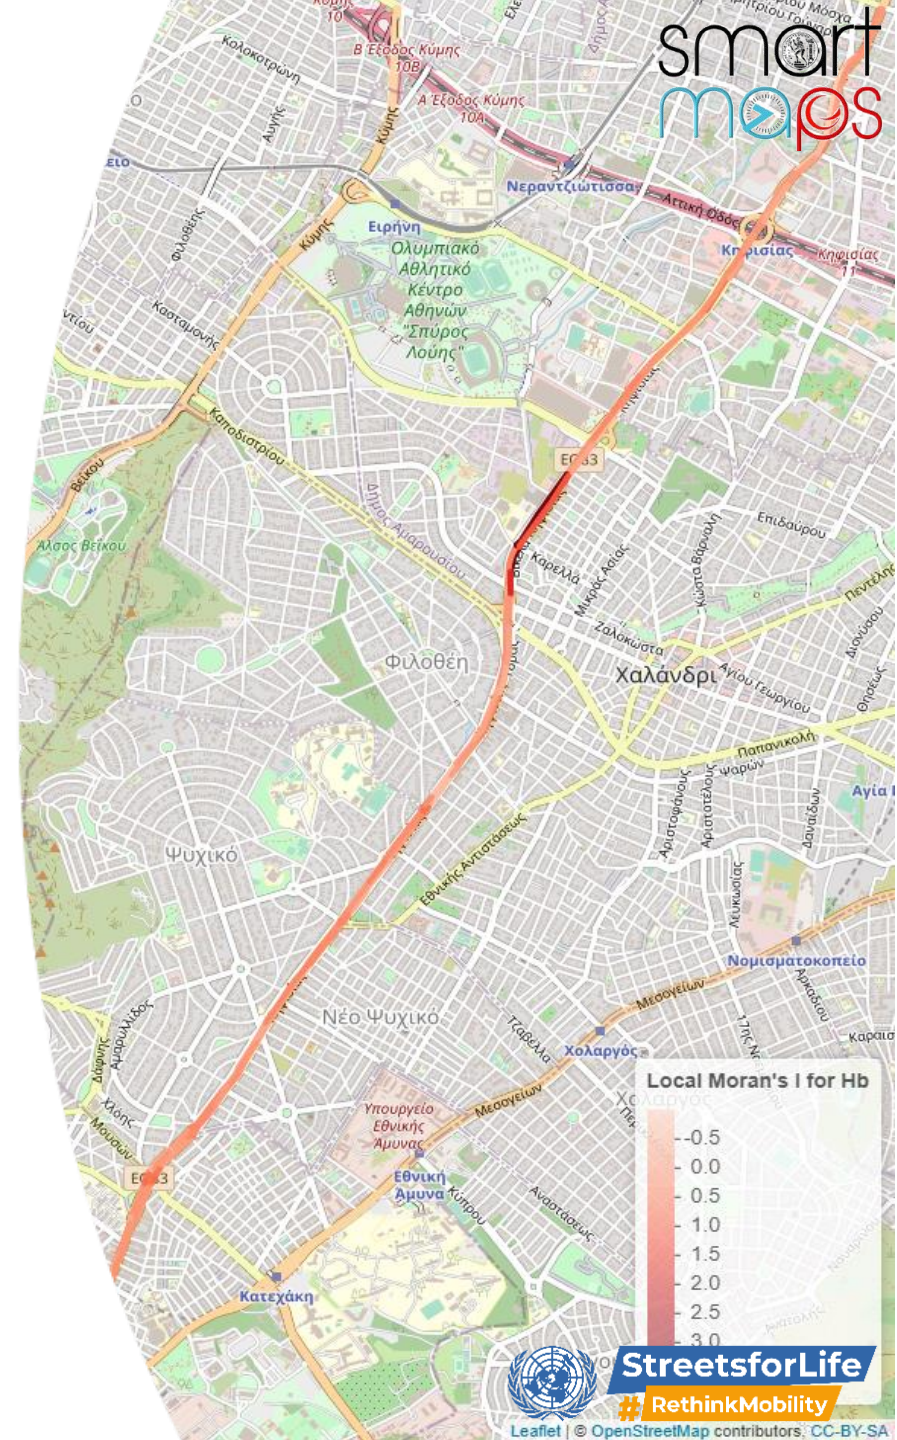

## Observed Driving Data (Global Link)

- Seatbelt use
- Helmet use
- Speeding
- Distraction

## Naturalistic Driving Data (OSeven Telematics)

- Harsh braking
- Harsh acceleration
- Speeding
- Distraction

## Road Crash Data (ELSTAT)

# Statistical analysis

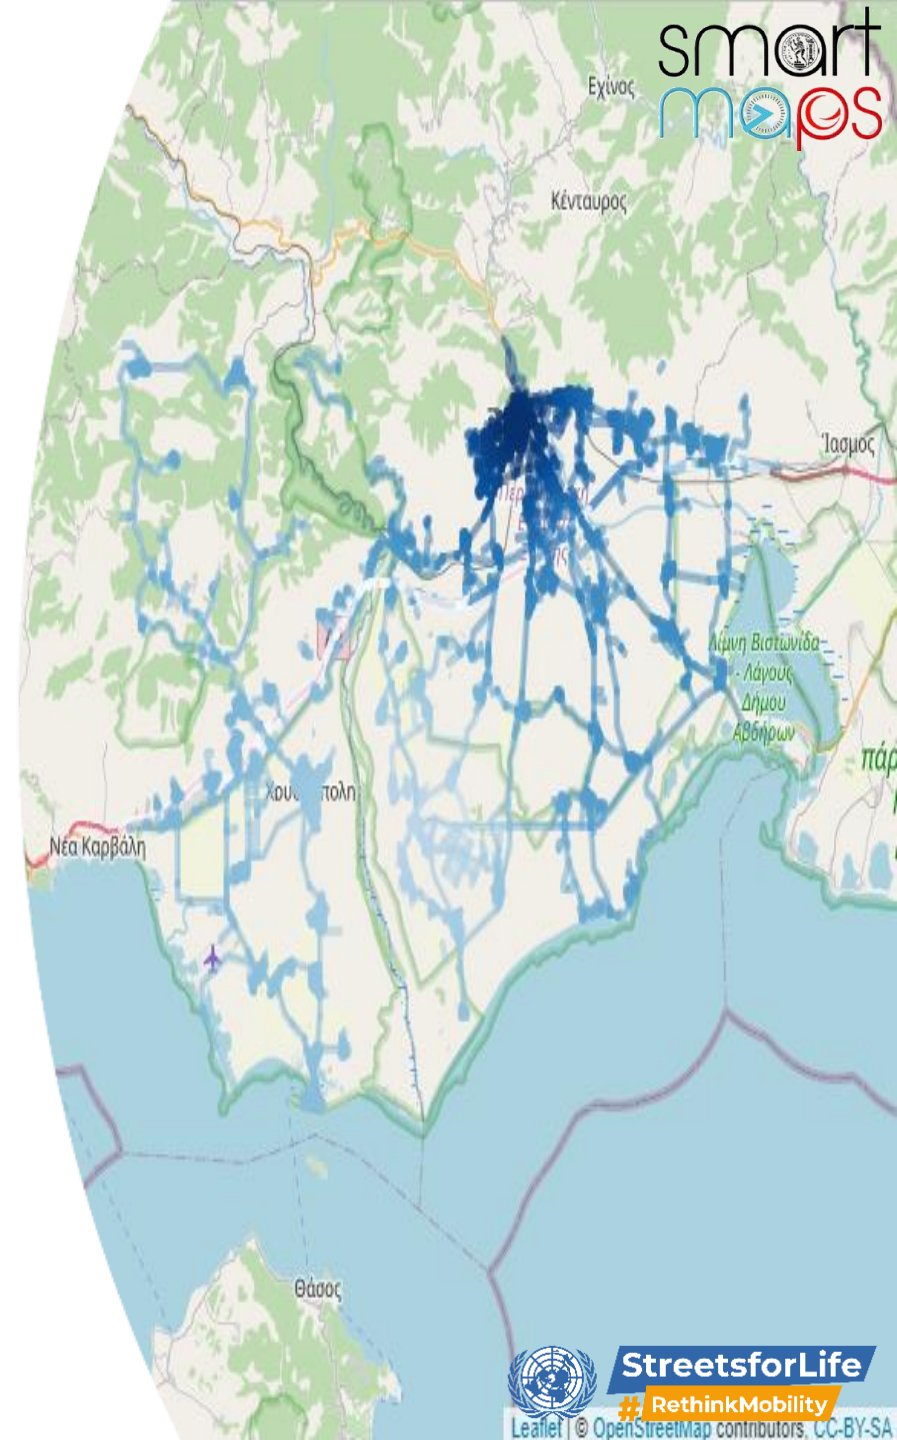

- Development of statistical models and **innovative machine learning** algorithms which consider:
  1. traffic data
  2. road geometry data
  3. road network data
  4. road crash data
  5. wider area/built environment data
- Several **scopes** to consider:
  1. **Macroscopic** spatial analysis (across regions)
  2. **Mesosopic** spatial analysis (segment scale)
  3. **Microscopic** behavioral analysis (per driver/sample)

# Indicative Findings

- Road geometry characteristics, naturalistic driving data, observed driving data and historical road crashes were **combined for road safety modelling**
- Significant positive effects of **segment length, speeding events, and trip count** on harsh braking events count
- **Spatial models** provide a better fit to the data than non-spatial models
- **Transferable methodology** allows for predictions in areas where no data are available

# Streets for life

- The SmartMaps online platform offers insights into potential hazards, accident-prone areas, and traffic conditions, empowering drivers, pedestrians, and city planners to take **proactive measures to enhance road safety**
- The project incorporates eco-driving information, as well; drivers are enabled to make environmentally friendly choices, reduce their carbon footprint, and contribute to a **more sustainable urban environment**
- By promoting inclusivity and accessibility, the project fosters widespread adoption and empowers a broader range of **stakeholders and authorities** to actively participate in creating safer city streets

# Scientific and Social Impact

- **Innovative and intuitive tools** for individual road users and decision makers
- Exploitation of **multidisciplinary data** to assess **multidimensional** impacts
- Novel scope of **scientific** approach and analysis
- Exploration of the **influence** of different policies on safety and environment
- Contribution towards UN and EU SDG goals for **crash and fuel consumption reductions** (SDGs 9&13)

# Future Challenges

- Selection of **representative** study **areas** and **driver** samples
- Methodological topics regarding **dataset harmonization and spatial scale normalization**
- Development of the **SmartMaps application** featuring a user-friendly front-end and an efficient back-end
- Provide the use of SmartMaps as a **good habit** for drivers; promote **safer** and **greener** driving
