This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Driver Drowsiness using DMS

A. S. Aghaei *et al.*, "Smart Driver Monitoring: When Signal Processing Meets Human Factors: In the driver's seat," in *IEEE Signal Processing Magazine*, Nov. 2016

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

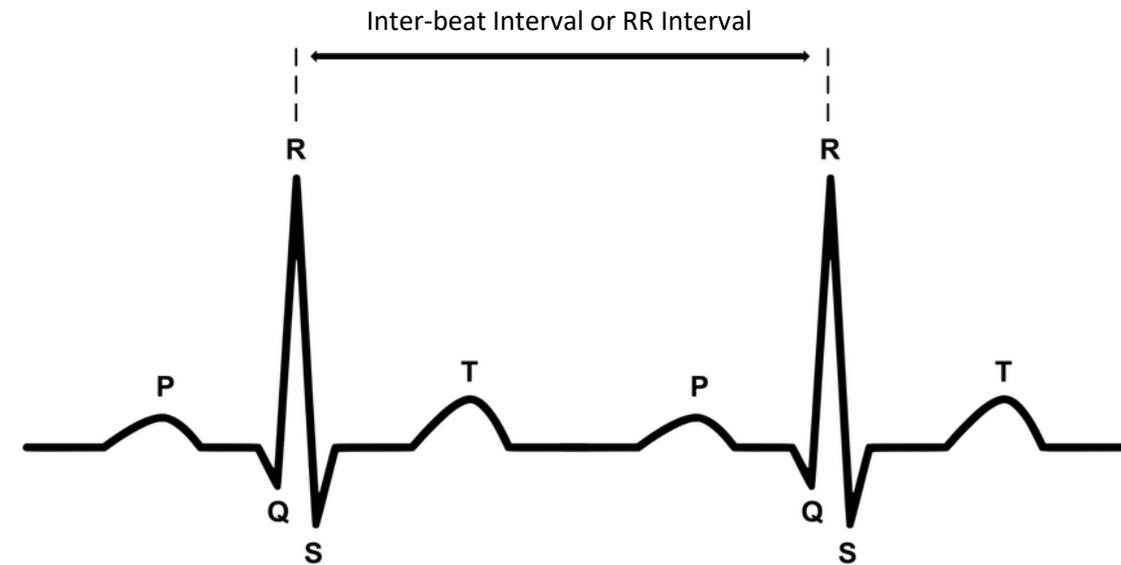

IEEE

Heart Rate Variability

- ❖ **Electrocardiography (ECG)** is the record of the electrical activity of the heart.
- ❖ **Heart Rate Variability (HRV)** is the physiological phenomenon of the variation in the time interval between consecutive heartbeats.

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

CardioWheel

CardioWheel is an advanced driver assistance system (ADAS) that assesses driver's status and driving pattern through the combination of **ECG** and **Steering Wheel Angle (SWA) Analysis**. Interacts and alerts the driver whenever drowsiness is detected, based on KSS scale.

Steering Wheel
Smart Conductive Leather or other Conductive material

Cardiowheel Device
Patented electronics for signal acquisition and processing

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Data Acquisition

Wearable alternative

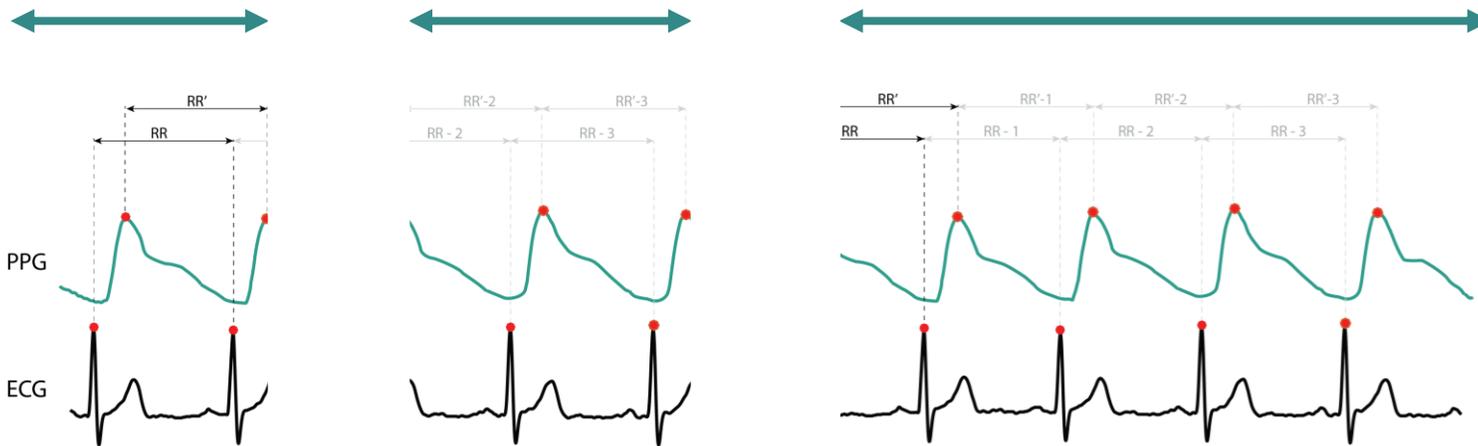

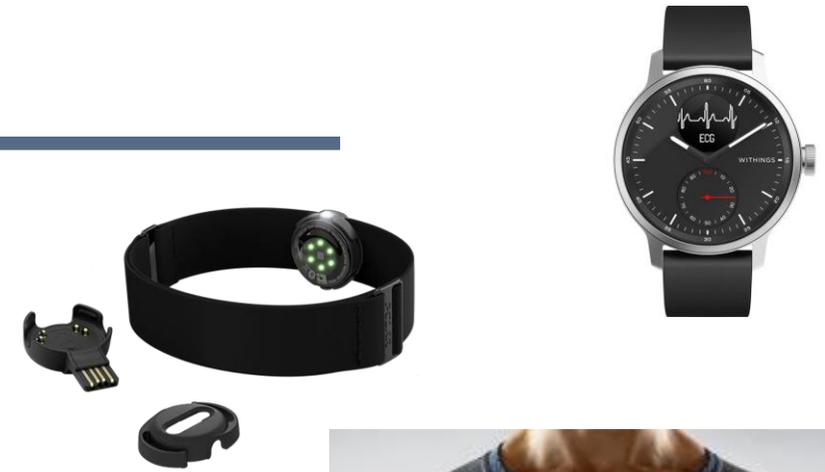

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Missing Inter-Beat Intervals

- ❖ Motion artifacts
- ❖ Sensor displacement
- ❖ Inconsistent skin contact

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

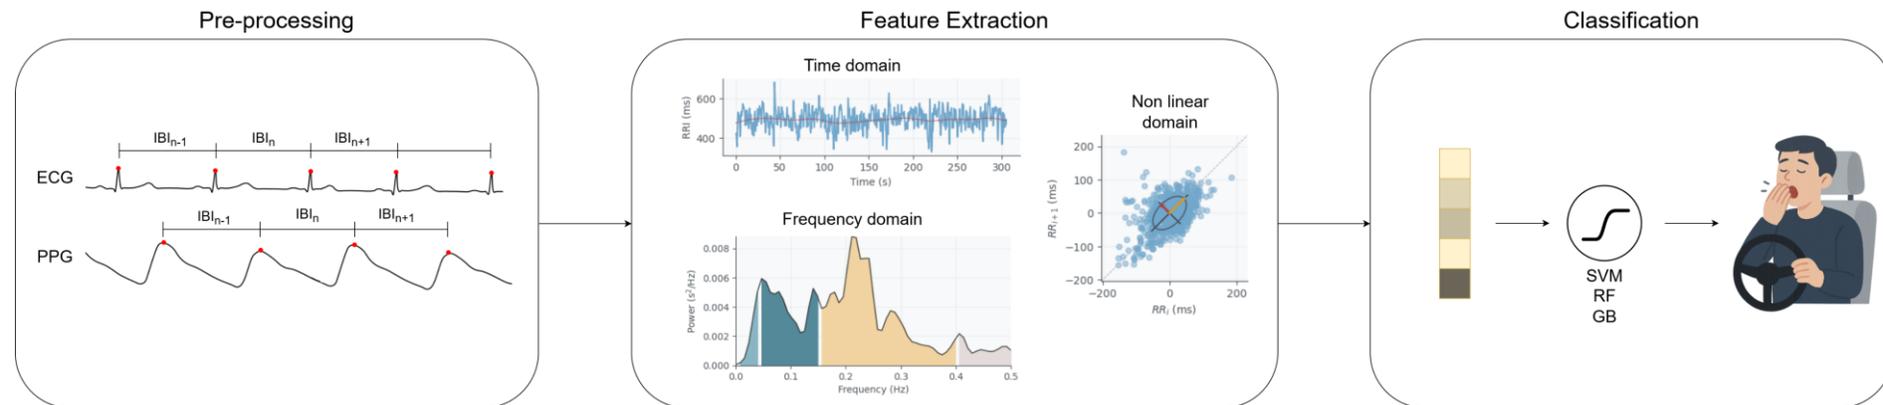

IEEE

ML based Drowsiness Detection

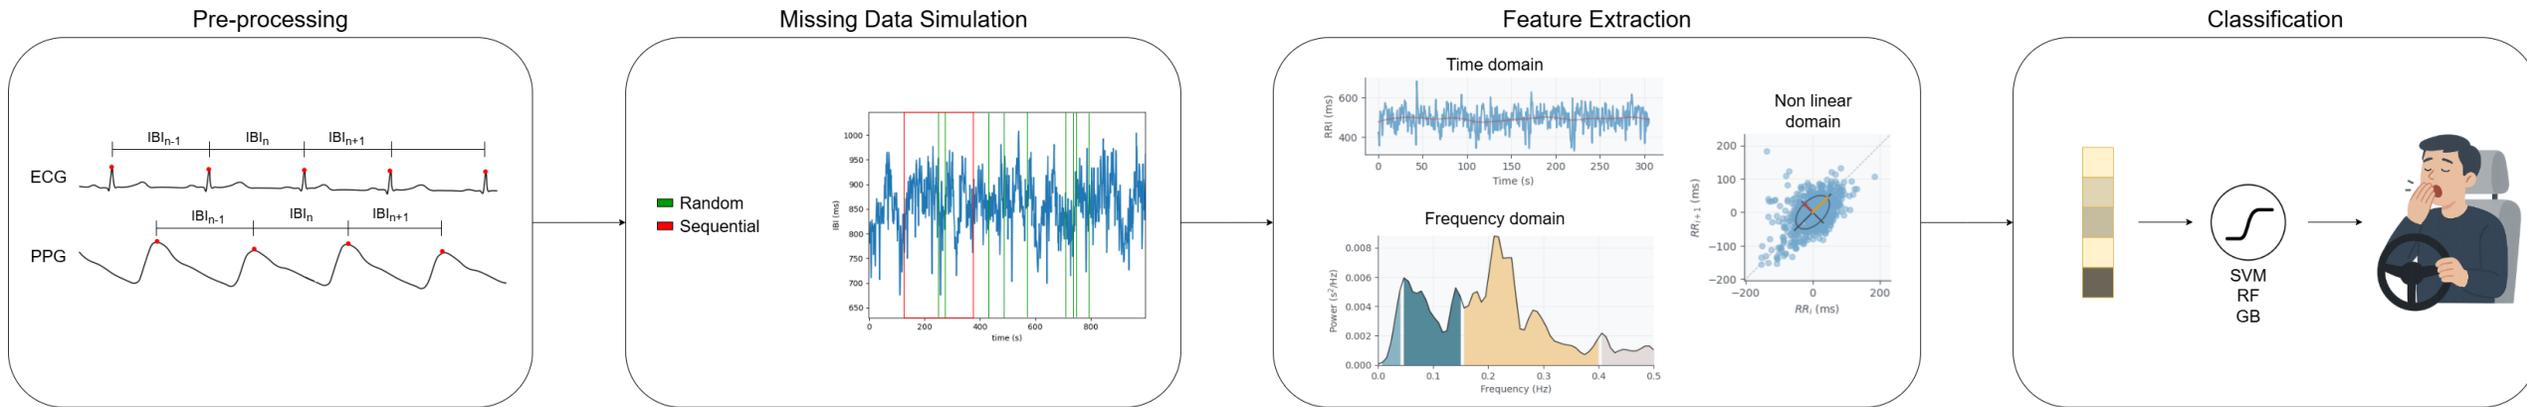

- ❖ Input: ECG or PPG or other signal, Ground Truth: KSS
- ❖ Pre-processing: Filtering, Artifact removal, R-peak detection
- ❖ Feature extraction: Time domain, Frequency domain, Non linear domain
- ❖ Feature based models: Support Vector Machine, Random Forest, Gradient Boosting

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

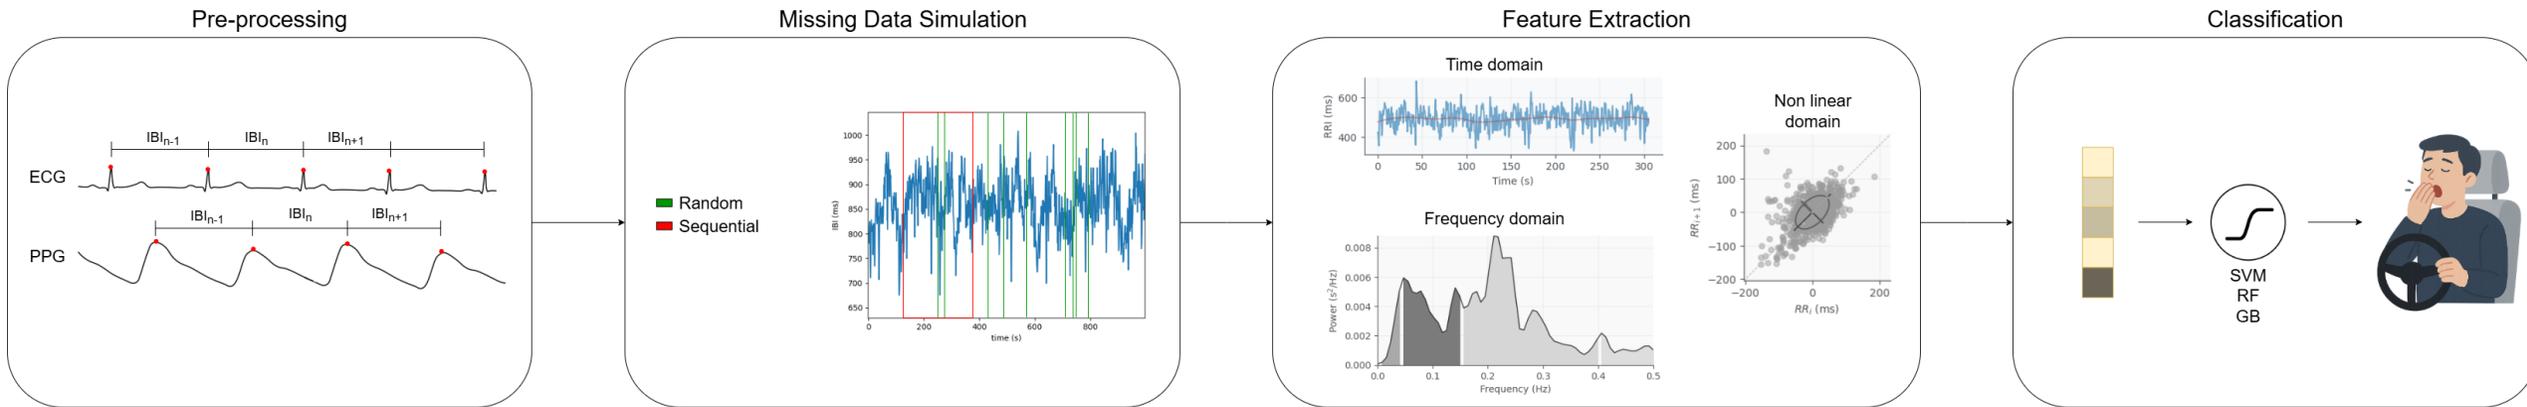

Missing Data Handling Workflow

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Missing Data Handling Workflow

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

IEEE

Karolinska Sleepiness Scale

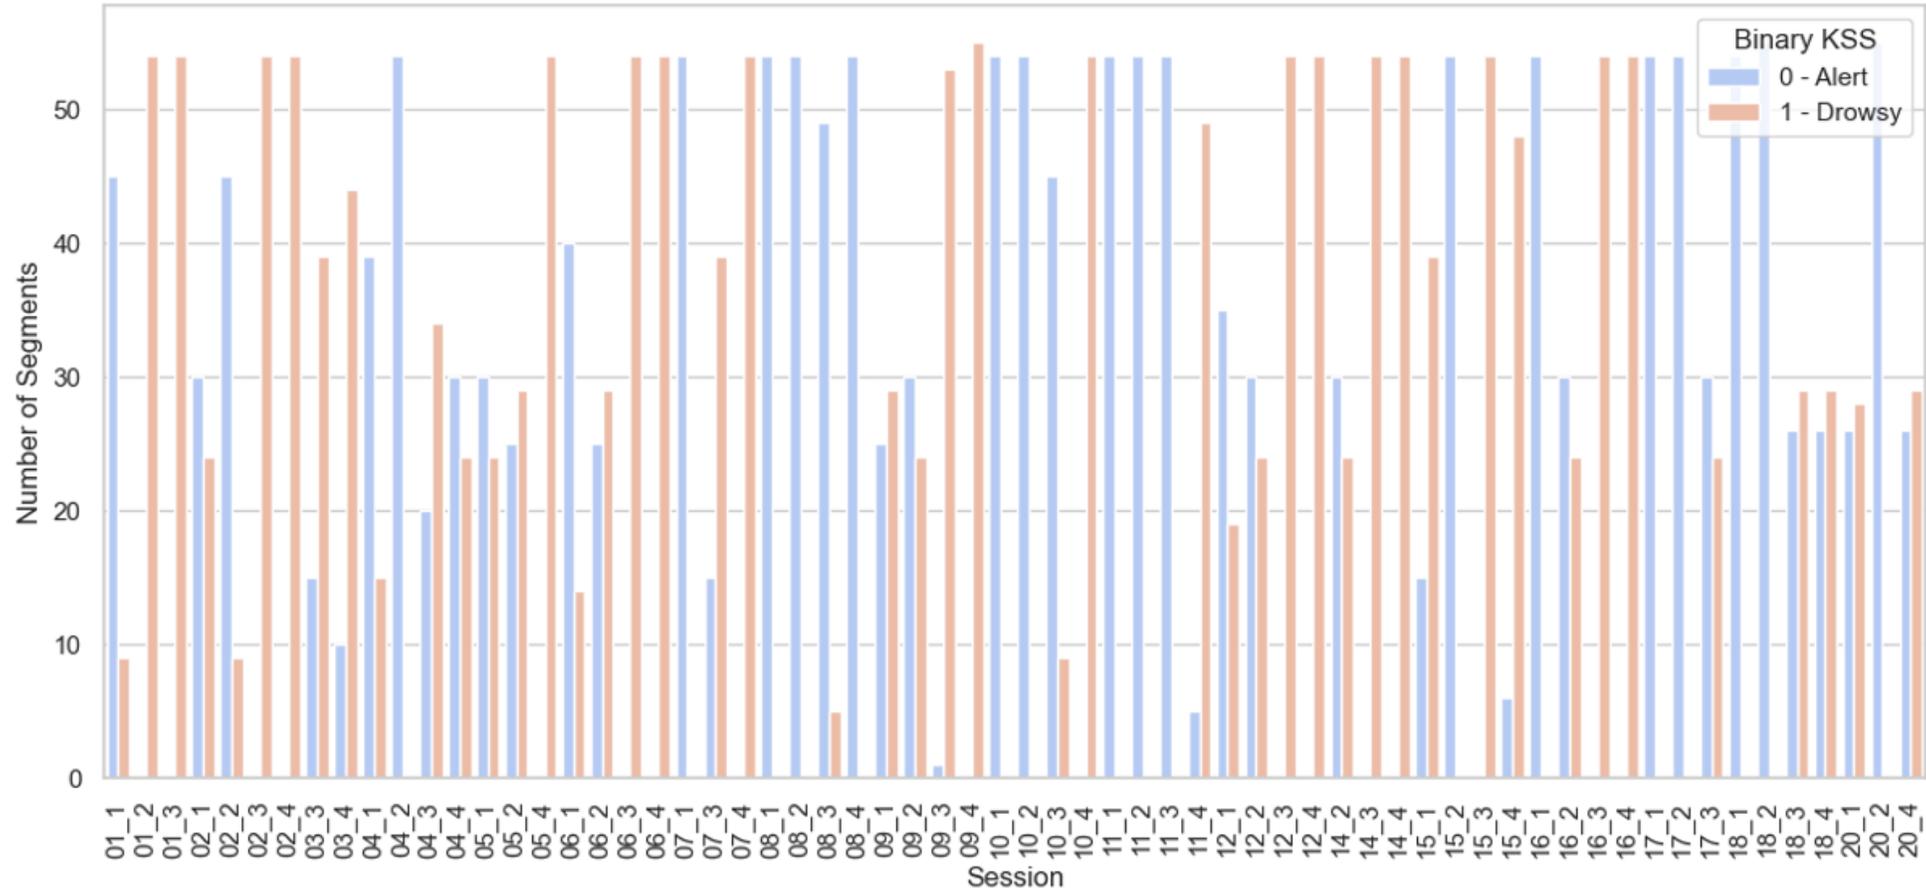

ALERT	1	Extremely Alert
	2	Very Alert
	3	Alert
	4	Rather Alert
	5	Neither Alert nor Sleepy
	6	Some Signs of Sleepiness
DROWSY	7	Sleepy, but no effort to keep awake
	8	Sleepy, some efforts to keep awake
	9	Sleepy, great effort to keep awake, fighting sleep

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

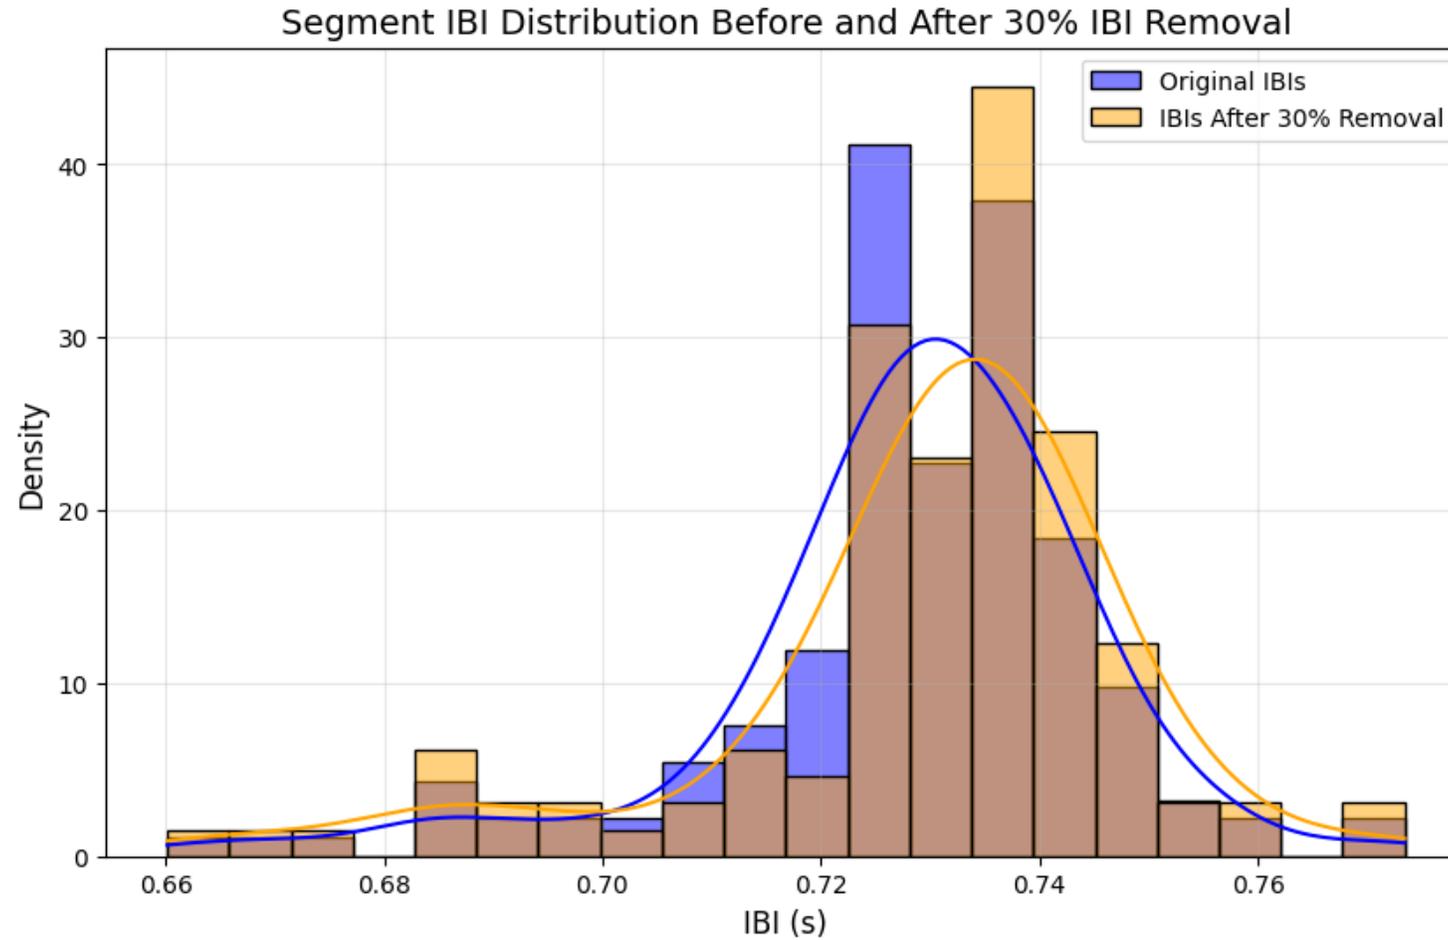

Binary KSS distribution per session

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Distribution Analysis

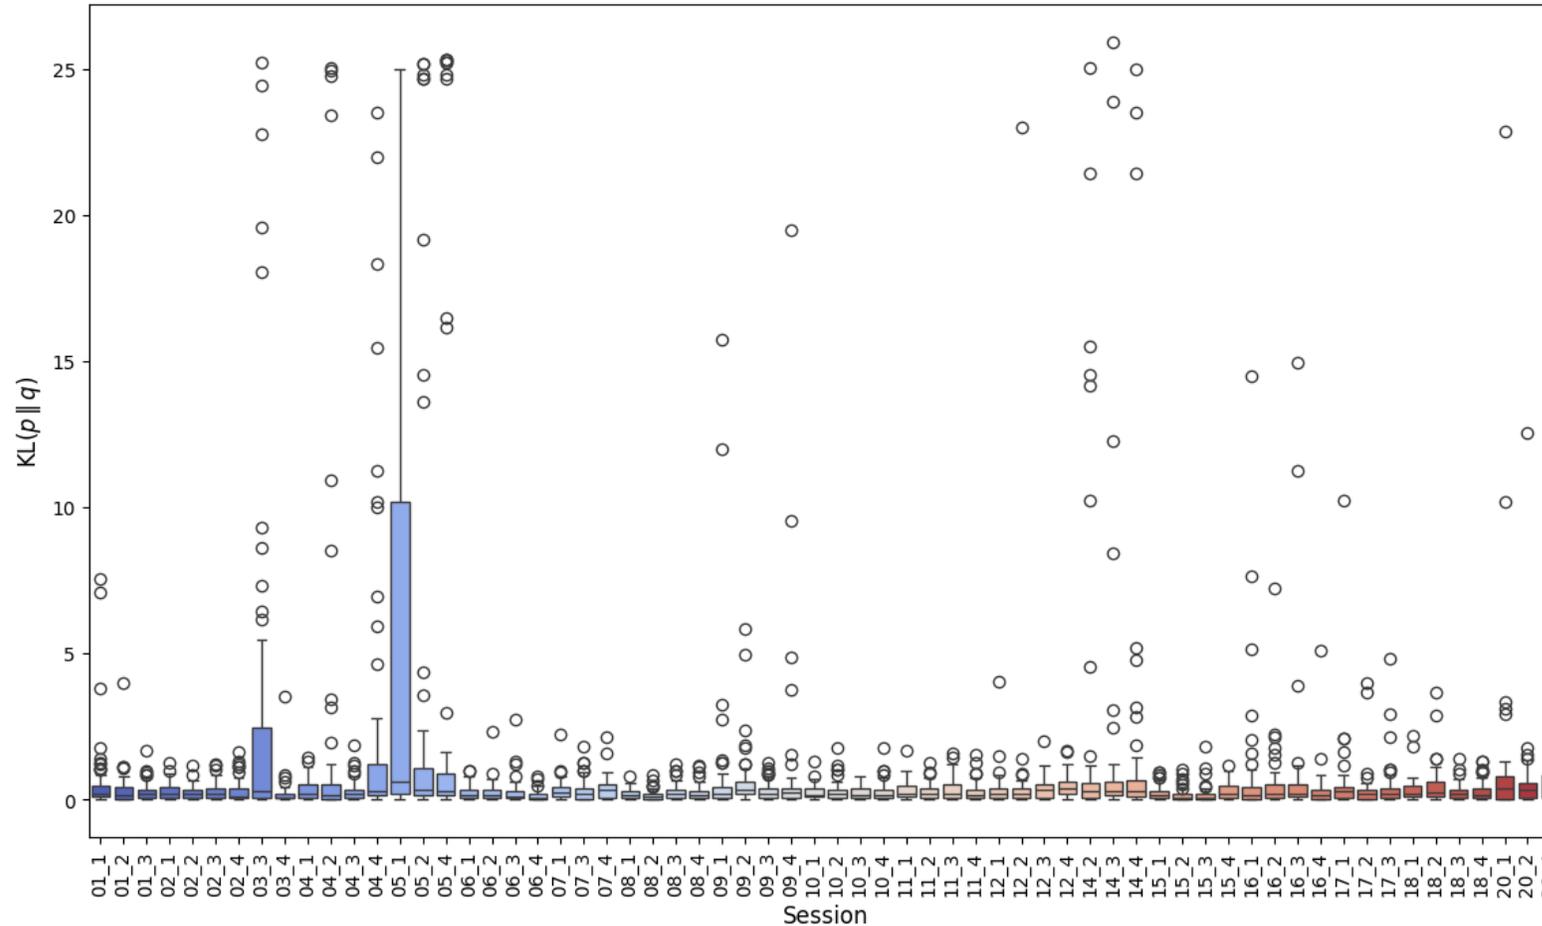

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Distribution Analysis

KL Divergence Across Sessions

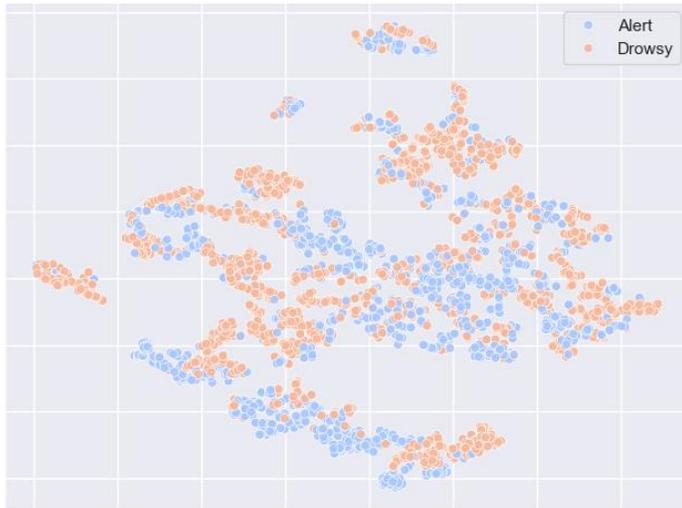

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Conclusion

- ❖ Missing IBI data does not significantly impact HRV-based drowsiness detection models
- ❖ HRV feature distributions remain stable even with increased data loss
- ❖ Inter-individual variability is important!
 - Results suggest the need for personalized or adaptive models

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590

Future Work

- ❖ Investigate and compare missing data handling techniques
- ❖ Assess impact on frequency-domain & nonlinear HRV features
- ❖ Improve model performance via hyperparameter tuning and feature importance analysis
- ❖ Incorporate temporal HRV dynamics across multiple time windows, instead of single-segment analysis

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101119590
