

Driving **too fast** is the most frequently reported **unsafe behaviour**

DUI of alcohol is only reported by **31%** of the respondents

More than 80% of the respondents report always wearing a **seat belt** as driver or as a passenger **in the front of the car**, but only **62%** stated that they always wear a seat belt as a passenger **in the back of the car**

Almost **40%** reported having made a **hand-held phone call** while driving and about **half of the respondents** reported having made a phone call using a **hands-free device**

Notes:

(1) Items concerning 'speeding', 'DUI' and 'distraction and fatigue' refer to unsafe traffic behaviour.

Therefore, the % of respondents that have set a certain unsafe behaviour 'at least once' during the past 12 months (i.e., scores 2-5 on a 5-point scale from 1 'never' to 5 '(almost) always') are presented. For 'seat belt use', on the other hand, all items refer to safe traffic behaviour. Thus, the % of respondents reporting (almost) always wearing their seat belt or using the appropriate restraint system for children (i.e., score 5 on a 5-point scale from 1 'never' to 5 '(almost) always') are presented.

(2) European weight B. In Slovenia, the question 'talk on a hand-held mobile phone' refers to talk on the mobile phone while driving, without limiting it to hand-held mobile phone use only.

(3) The specification about the height of children (over/under '150 cm') was adapted to the policies in each country (e.g. in Belgium regulations state '135 cm').
